

# Extension Antenna Guide

Weaker Signal

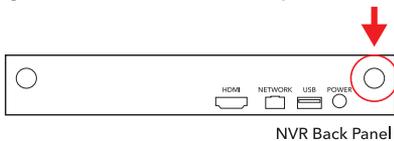

Even though our standard antenna will provide a good enough signal, there are cases where you might need to place the camera where the directly mounted antenna is not enough.

If you set up a camera where the signal would pass through the obstacle, the signal can degrade.

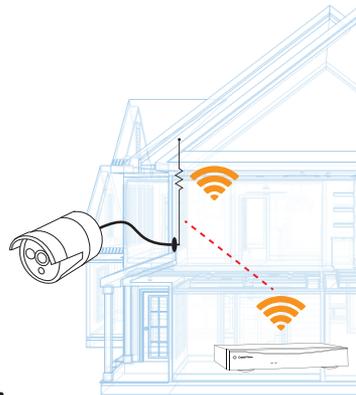

## How the Extension Antenna can help.

You can replace the standard antenna on the camera to run the 10ft extension antenna cord through the wall and place the antenna inside of the wall thus eliminating a major obstacle for the signal. This will result in a stronger signal and a better experience.

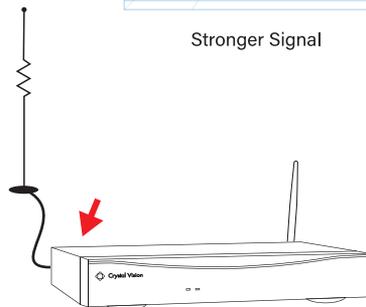

If you want to replace the antenna on the NVR, please use the right-hand side antenna port first.

NVR Back Panel

Stronger Signal

The extension antenna comes with a 10 ft extension cord.
