and ANSI A208.2-2016 certified

CAUTION | WOOD DUST: Drilling, sawing, sanding or machining wood products can produce wood dust that can cause a flammable or explosive hazard. Wood dust may cause lung, upper respiratory tract, eye and skin irritation. Some wood species may cause dermatitis and/or respiratory allergic effects. The International Agency for Research on Cancer (IARC), the National Toxicology Program (NTP) and the State of California have classified wood dust as a known human carcinogen. This determination is based on evidence that prolonged exposure to and inhalation of wood dust increases the risk of nasal and paranasal cancer. Measures to minimize potential risk include: Avoid dust contact with ignition source. Sweep or vacuum dust for recovery or disposal. Avoid prolonged or repeated breathing of wood dust in air. Avoid dust contact with eyes and skin-; use a respirator or other safe guards to avoid inhaling wood dust. **FIRST AID:** In case of contact, flush eyes and skin with water. If irritation persists, call a physician. **Inhalation:** Remove to fresh air. Get medical attention if persistent irritation, severe coughing or breathing difficulty occurs. For additional information, see the Wood Dust Material Safety Data sheet on file in your office.
