

instruction for installation

There are three types of glass: large, medium and small.

Glass is installed on the round branches on the lamp body in the order of large, medium and large.

Small glass is installed on the short round branches of the lamp body.

Twist the dental bar onto the cuttlefish nut first, then align the glass with the mouth of the round branch and lock the cuttlefish nut.

1. Align the hole position of the hanging plate screw with the hole position of the ceiling plate, and then lock the hanging plate screw.
2. Fix the hanging plate to the ceiling, connect the main line of the lamp body with the reserved wires in the ceiling, and install the ceiling suction plate. Fix it with a cuttlefish nut (the height of the lamp body can be adjusted by steel wire).
3. Install the glass sheet from the inside to the outside. See the schematic diagram for the installation method.

After the installation is completed, remember to dry the hand-held places on the lamp body to avoid oxidation of the lamp body.
