

Read Before Installation

DO NOT cut or install until you have verified **PRODUCT, COLOR, and SIZE.**

****This product is intended for direct glue-down only**** It is not intended to be loose-laid as a rug, or installed with snaps. Any installation method other than direct glue-down voids any and all warranties (expressed and implied).

No claims for manufacturing defects, incorrect product, incorrect color, or shortage will be honored once carpet has been cut, glued, stapled, or installed. *The product should be kept clean and dry until installed.*

The best way to care for/clean your new indoor/outdoor carpet is to vacuum it with a **SUCTION VACUUM ONLY**. If your vacuum has a beater bar, you should disengage it when vacuuming indoor/outdoor carpet. Using a beater bar or brush can cause yarns to “feather out” or lose their twist, resulting in pilling or fuzzing. They can also cause snags started by pets or rough furniture to pull and run. Any such snags should be clipped immediately with scissors to minimize the “run”. Polypropylene fibers are inherently color-fast. Any stains should be cleaned as soon as they are found. This can be done with water and household detergent (such as Dawn dish soap). Wet the area, apply a small amount of soap, and rub briskly with a clean cloth or soft bristled brush; then rinse thoroughly and allow the area to dry completely. Proper care and maintenance (including vacuuming these products with suction only) will ensure your new indoor/outdoor carpet will maintain its unique character for a long time to come.
