1

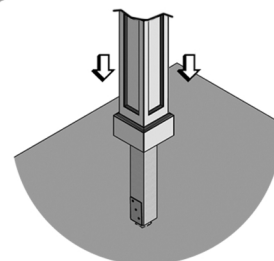

Dig a 24" deep hole in the desired location and insert a 4x4 wood post. Leave 42" exposed above ground. Fill in the hole with pre-mix concrete (not included) and level the wood post. Allow time for the concrete to cure.

2

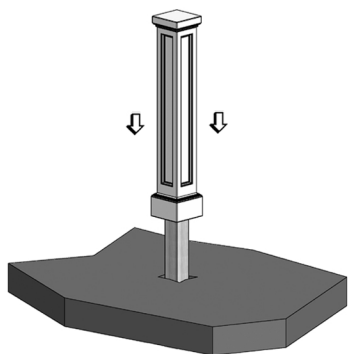

Optional Mayne "No-Dig" Ground Screw:

Twist the screw into the ground and attach a 4x4 post with the five lag bolts provided (approx. 39.5" length of 4x4 required, not included). Slide the decorative post over the 4x4.

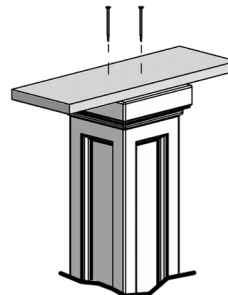

3

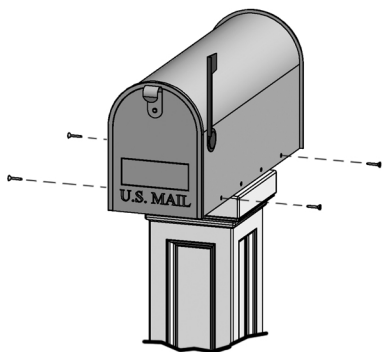

Slide the Bradford pedestal post over the 4x4 wood post. Make sure the post sits flush on top and keep it centered over the 4x4.

4

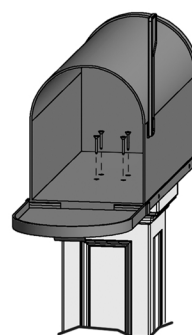

Center the wood mounting board on top of the post and secure in place with two 3 inch wood screws (mounting board and screws not included). Universal mounting boards are available at the local hardware store or you can cut a piece of plywood to match the size of your mailbox.

5

Set the mailbox on the mounting board. Secure in place using four 3/4 inch wood screws (mailbox and screws not included).

6

Alternative Installation: Center the mailbox on top of the Bradford post and secure 4 screws through the floor of the mailbox directly into the 4x4 inside. You may need to pre-drill holes to ensure the screws are aligned with the 4x4.
