

Van Zyverden's
SPECIALTY BEGONIAS BRONZE LEAF RED

Tuberous begonias were discovered in the forests of Bolivia and Peru. Next to bedding begonias ('Semperflorens') tuberous begonias are probably the best-known, most widely grown and are enjoyed by the average gardener around the world. Growing and caring for begonias is easy, especially when growing from tubers. They produce stunning showy large flowers.

Excellent as pot plants

Bloom in the shade

Exceptional bronze foliage

About This Variety: This Bronze leafed variety, with camellia-like double blooms, are best enjoyed in pots or in beds along pathways.

Growing Instructions: In the North, tubers should be started indoors in late winter or early spring to bloom by summer. Then once weather permits, after danger of frost, they can be moved outdoors. Plant them concave side up. Growing begonias from tubers requires warm temperatures. Plant 1 tuber per 7-10" pot.

Care Tip: These are not plants for the deep south or desert Southwest as they do not grow well in hot, arid environments without special care. Shade from hot sunlight, but they do need some sun. Keep containers moist, but avoid overwatering. Removing any wilted leaves or flowers will encourage the plants to produce more flowers.

Exposure: Partial shade to full shade

Height: Grows 6-8" tall

Spacing: Plant 6-8" apart, 1-2" deep

Hardy in: USDA zones 9-10 as they are cold sensitive

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
