

Washing Machine Outlet Box

Available with or without hammer arrestors

1/4 Turn Ball Valve Push-fit Connections

Connects to PEX, CPVC or Copper Pipe

1/2

Boîte de Raccordement pour Machine à Laver

Boîte de raccordement pour machine à laver

Raccords-poussoirs à clapet à bille quart de tour

Se raccorde à des tuyaux en PEX, CPVC ou en cuivre

Caja de Conexión para Lavarropas

Caja de conexión para lavarropas

Conexiones a presión para válvula esférica de 1/4 de giro

Apta para conexión de tubería de PEX, CPVC y cobre

Installation Instructions

1. Read all instructions carefully prior to installation. Turn off and drain water supply to any involved piping.
2. Determine orientation of the drain. The box can be mounted for a right hand or left hand drain (Figure A). Alternatively, the box can be rotated 180o for a center drain option (Figure A). The valves will operate normally in either orientation.
3. For a center drain application with bottom supplied water lines, the valves must be moved to either side of the center drain. Refer to A-1 instructions below.
4. Insert the mounting brackets into the slots on the sides of box (Figure B).
5. Nail or screw the mounting brackets to the wall studs (Figure C) making sure that the outlet box is located above the water level of the washer (approx. 42" from the floor level).
6. Solvent weld 2" DWV pipe to the desired drain opening (Figure D). Use PVC solvent cement for PVC drain pipe and ABS solvent cement for ABS drain pipe.
7. Test drainage system to ensure no water leaks are present. When test is complete, carefully knock out the test cap using a hammer and screwdriver. Refer to A-2 instructions below. Do not attempt to knock-out test caps before securing outlet box to drain pipe.
8. For push-to-connect boxes: Connect water distribution lines (Figure E) to the SharkBite push-fits. SharkBite push-fits can connect to copper, CPVC or PEX pipe. For PEX boxes: Connect 1/2" water distribution lines (Figure E) to the SharkBite PEX barb fitting and secure using stainless steel Oetiker PEX clamps or copper crimp rings.
9. Secure or brace supply lines into place to prevent movement.
10. When wall surface is finished, snap faceplate into place. Secure the drain hose into the drain line and attach hot and cold supply lines to the respective valves (Figure F).
11. When ready for use, turn on the water supply. Check for hose leaks at valve.
12. To ensure against possible future hose failure, water supply should always be shut off when not in use.

Figure A-1. Valve Removal for Inverted Box

Position flathead screwdriver on the inner knockout score.

Tap screwdriver with hammer until knockout is loosened. Remove with hand. Repeat for other valve location.

Hold valve tight with channel lock pliers and unscrew SharkBite connection, then remove locknut.

First install locknut to valve then reinstall SharkBite connection. Connection should be tightened until black gasket is not visible.

Figure A-2. Knockout Instructions: Do not attempt to knockout test caps before securing outlet box to drain pipe.

Position flathead screwdriver at intersection of bottom wall and raised test cap.

Hit screwdriver until it penetrates under test cap.

Rotate screwdriver lifting up test cap.

Reach in with hand or pliers and remove test cap.
