

FLAG HANGING KIT FOR DECK RAILINGS

UNIVERSAL FIT ON VERTICAL SPINDLES

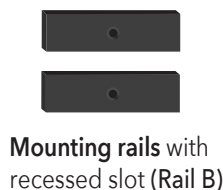

Connects to PVC, metal, wood, round or square spindles from 1/2" to 1-3/4" thick.

Typically Wrought Iron & Aluminum use the shortest bolt, PVC/Vinyl, Trex and many wood spindles will use the middle bolt. Custom wood spindles can be thicker and therefore use the longest bolt.

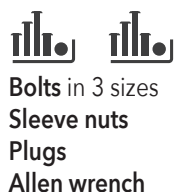

Included in the kit:

Keyhole rails with pole mount

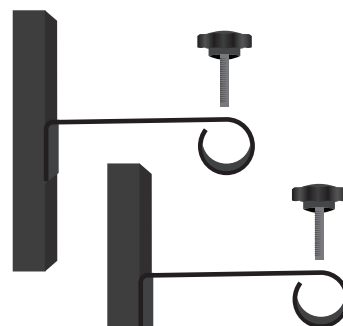

Mounting rails with recessed slot (Rail B)

Bolts in 3 sizes
Sleeve nuts
Plugs
Allen wrench

1. Prep your flag pole assembly

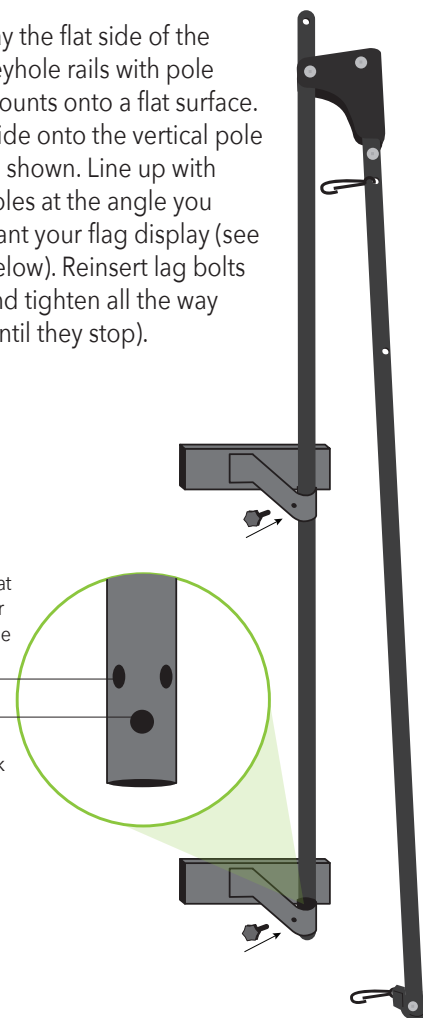

1a. Unscrew lag bolts from the pole mounts

1b. Lay the flat side of the keyhole rails with pole mounts onto a flat surface. Slide onto the vertical pole as shown. Line up with holes at the angle you want your flag display (see below). Reinsert lag bolts and tighten all the way (until they stop).

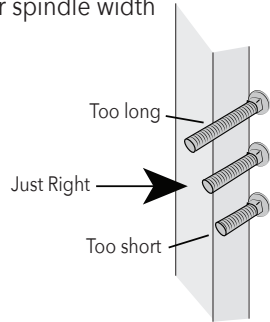

To hang your flag at an angle from your deck use one of the side positions

To hang your flag perpendicular to deck use center position

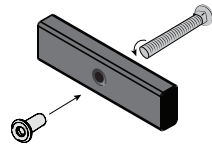

2. Install flag pole onto deck rails

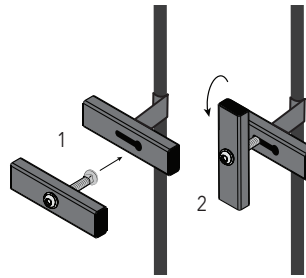

- 2a.** Choose the bolt that is just a bit longer than your spindle width

- 2b.** Insert sleeve nuts into recessed holes of Rail B and loosely screw bolts into the sleeve nuts.

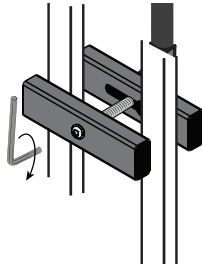

- 2c.** Attach both mounting rails to the pole assembly via the keyhole slots. Let the mounting rails hang vertically.

- 2d.** Bring the entire assembled flag pole with mounting rails to your deck. Guide the vertical mounting rails through the spindles at the desired position.

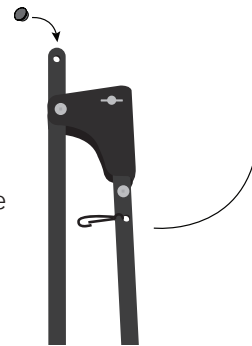

- 2e.** Turn mounting rails horizontal and tighten sleeve nuts with Allen wrench. Before they get too snug, adjust the mounts on both sides to be level and balanced on the spindles, then tighten until snug.

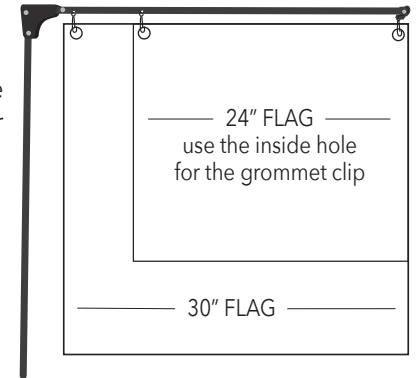

- 2f.** Cap top of pole with plug.

Unscrew the wing nut at the top and pull out the bolt (careful not to drop) - pull the flag pole up to 90°, re-insert the bolt and tighten with the wing nut.

NOTE: It may be easier to slide or clip your flag on while the pole is down rather than extended.

- 2g.** Connect grommeted flag to hooks, or slide sleeved flag over the pole.
