- All set screws of the fan must be checked and retightened where necessary before installation.
- To reduce the risk of personal injury, do not bend the blade brackets when installing the brackets, balancing the blades or cleaning the fan. Do not insert foreign objects between rotating fan blades.
- Before changing the fan direction, turn off the fan and wait for the fan blades to stop completely.
- The safeguards provided by these safety instructions and by the separate installation instructions are not meant to cover all possible conditions and situations that may occur. It must be understood that common sense, caution and care are factors which can not be built into this product. These factors must be supplied by the person(s) installing, caring for and operating the fan.

INSTALLATION INSTRUCTIONS

IMPORTANT:

- BEFORE YOU BEGIN INSTALLATION, CAREFULLY READ ALL INFORMATION PROVIDED IN THE SAFETY INSTRUCTIONS AND INSTALLATION INSTRUCTIONS. IF IN DOUBT, CONSULT A QUALIFIED ELECTRICIAN.
- SAVE ALL INSTRUCTIONS.

NOTE: The fan weight is 15.1 lbs (6.85 kgs). Be sure the outlet box you are using is securely attached to the building structure and can support the full weight of the fan. Failure to do so can result in serious injury.

Installation Steps :

Turn OFF the electric circuit at the main fuse or circuit breaker box.

Unscrew the metal washers and hex nuts from mounting bracket. Please save the metal washers and hex nuts for Fig.8 step use.

Tighten the hanger bracket to the outlet box with two mounting screws.

(Make sure the outlet box is securely installed so that it will be able to support at least the fan weight.)

Attach the safety cable hook to the ceiling and make sure the safety cable hook is covered by the fan canopy. Pull the electrical wires from the outlet box through the center hole of the mounting bracket for motor wiring installation.

WARNING: MOUNT ONLY TO AN OUTLET BOX MARKED "ACCEPTABLE FOR FAN SUPPORT"!

Attach hang motor assembly onto mounting bracket. Insert the long loop hole of mounting bar to the poth hook for hands-free wiring. (See Fig.4)

Hang the safety cable into the safety cable hook, tighten the safety cable to the safety cable hook by using the zip-tie.

Attach the mounting bar to mounting bracket with metal washers and hex nuts by hand and then free your hands to secure the hex nuts by spanner.

There are four mounting bracket screws and lock washers. Remove two screws and lock washers from the mounting bracket (one from each side) and loosen the other two remaining screws. Align the "L shaped" slots of the housing with the two remaining screws on the mounting bracket and push the housing upwards to engage the slots and turn clockwise to lock in place. Tighten the screws and install the other two mounting bracket screws and lock washers which were removed before into the remaining holes of the housing and tighten.

Install without fan light

Tighten blades to blade brackets by using blade screws and washers.

Remove the motor screws and washers from hang motor assembly first. Secure the blade brackets to the motor with motor screws and washers.

Make sure the wires of the fan light in the switch box are capped with wire connector. Secure the switch box cover into switch box with the switch box cover screws. **To install the fan light, skip this step and proceed to Fig.13.**

Install fan light

Remove screws from fan light first, then connect the white (neutral) wire from the fan light to white (neutral) wire from switch box with a wire connector, connect the black (hot) wire from fan light to blue (hot) wire from switch box with a wire connector.

Carefully put the wires into the switch box, then attach the fan light into the switch box with the fan light screws. Remove three socket rings from the fan light for later use.

Attach the glass shades onto the glass holders, secure them with socket rings.

Install LED bulbs (included). See relamping label at socket area or packaging for maximum wattage allowed.

The slide switch on switch box sets direction of fan rotation. Select the desired direction of fan rotation. Push the slide switch down for " Forward" and up for "Reverse".

Note: Wait for fan to stop before reversing the direction of blade rotation.

Install two pull chains and drops onto the pull chains located in the switch box and light kit.

The pull chain controls the fan speed as follows:

1 pull – High, 2 pull – Medium, 3 pull – Low, and 4 pull – Off.

To turn the light kit "ON" or "OFF", pull the chain that is attached to the light kit.

Caution:

1. If you install a wall control for this fan, pull the pull chains to "high speed" of the fan motor and "on" of the fan light.
2. Compatible wall switch model No.: Lutron SKU# S2-LFSQH-WH / Hunter SKU# 27183.

Turn ON the electric power at the main fuse or circuit breaker box.

Troubleshooting Guide

If you have difficulty operating your new ceiling fan, it may be the result of incorrect assembly, installation or wiring. In some cases, these installation errors may be mistaken for defects. If you experience any faults, please check this Troubleshooting Guide. If a problem cannot be remedied or you are experiencing difficulty in installation, please call our Customer Service Department (1-800-482-9235).

PROBLEM	SUGGESTED REMEDY
1. If fan does not start:	<ol style="list-style-type: none">1. Check main and branch circuit fuses or circuit breakers.2. Make sure forward/reverse switch is firmly in bottom or top position. Fan will not operate when switch is in the middle.3. Make sure that the wall control is turned "ON".4. Check line wire connections to fan and switch wire connections in switch housing. CAUTION: Make sure main power is turned off.
2. If fan sounds noisy:	<ol style="list-style-type: none">1. Make sure all screws in motor housing are snug. (not too tight)2. Make sure the screws which attach the fan blade bracket to the motor are tight.3. Make sure wire connectors in switch housing are not rattling against each other or against the interior wall of the switch housing. CAUTION: Make sure main power is turned off before accessing switch housing.4. If using an optional ceiling fan light kit, check to be sure the screws securing the glassware are finger tight. Check to be sure light bulb is tight in socket and not touching glass shade(s). If vibration persists from glass, remove glass and install a 1/4 in. wide rubber band on glass neck to act as an insulator. Replace glass and tighten screws against rubber band.5. Some fan motors are sensitive to signals from Solid State variable speed controls. DO NOT USE a Solid State variable speed control.6. Allow "break-in" period of 24 hours. Most noises associated with a new fan will disappear after this period.
3. If fan wobbles:	<p>All blades are weighed and grouped by weight. Natural woods vary in density which could cause the fan to wobble even though all blades are weight-matched. The following procedures should eliminate most of the wobble. Check for wobble after each step.</p> <ol style="list-style-type: none">1. Check that all blades are screwed firmly into blade brackets.2. Check that all blade brackets are tightened securely to motor.3. Make sure that canopy and mounting bracket are tightened securely to ceiling junction box and junction box is mounted firmly to ceiling joist.4. Most fan wobble problems are caused when blades are not equally level. To check the blade levels, select a point on the ceiling above the tip of any blade. Measure the distance from the ceiling to the blade tip, to an accuracy of 1/8 inch. Rotate the blades until the next blade is in the measuring position. Repeat measurement for each blade. If all blade levels are not equal, you can adjust blade levels by the following procedure. To adjust a blade tip down, insert a washer (not supplied) between the blade and blade bracket at the screw closest to the motor. To adjust a blade tip up, insert washer (not supplied) between the blade and blade bracket at the two screws farthest from the motor.5. If blade wobble is still noticeable, interchanging two adjacent (side by side) blades can redistribute the weight and possibly result in smoother operation.
4. If light does not work:	<ol style="list-style-type: none">1. Check blue wire from fan to make sure it is connected to hot wire from house.2. Check for loose or disconnected wires in fan switch housing.3. Check for loose or disconnected wires in light kit.4. Check for faulty light bulbs. CAUTION: Make sure main power is turned off before accessing switch housing.
