Carlton® Horizontal Adjust-A-Box® Non-Metallic Electrical Box

Saves Labor Time and Costs.

Easy to use for remodel or new work applications.

Adjustability for different wall thickness with the simple turn of a screw has made the Carlton® Adjust-A-Box® line a favorite of electrical installers everywhere.

Now the latest addition to the Adjust-A-Box® family puts a new twist on an old favorite with its horizontal orientation — perfect for mounting kitchen and baseboard receptacles.

The single-gang, large-capacity, non-metallic box features a metal bracket for horizontal mounting that clips onto any standard wood or metal stud. The box mounts squarely and securely without screws or nails, but mounting holes are provided for non-standard studs or where more secure mounting is required.

- Preset at 1/2", adjustable from 0 to 1 7/8" to accommodate varying wall thicknesses
- Horizontal orientation for kitchen, bath and baseboard receptacles
- Large, 21 cu. in. capacity for duplex or GFCI receptacles
- Carlton® Blue™ PVC for easy identification of power
- Ideal for use with ceramic tile and baseboards for new or rework
- Blends well with rectangular tile
- Ideal for use in limited-space multi-level islands

Fast, Easy Installation

Clip the Adjust-A-Box® metal bracket onto the stud for square, secure mounting.

Turn the Adjust-A-Box® screw after installation to bring the box flush with the wall surface.
