

Van Zyverden's
BLUEBERRY BLUECROP

Here is a sweet, and unique treat to delight the palate. These berries add delectable color and sweetness to desserts. Plus, they make an attractive ornamental as they produce bell-shaped white-pink flowers in early spring, and dark green leaves which turn shades of red in the fall. The reddish stems add winter interest.

Grow your own

*Self-fertile, but cross pollination
produces a better crop*

*Many health benefits are claimed
as they contain antioxidants*

About This Variety: Vaccinium corymbosum Bluecrop, known as a highbush blueberry, produces light blue blueberries which ripen in the summer.

Growing Instructions: Best grown in acidic, rich, medium to wet soils in full sun. Constant moisture and drainage is advised. Planting with other blue berry varieties increases crop production. Its best to remove the flowers from the plant in the year of planting to encourage vegetative growth. Prune late winter in the third year.

Care Tip: Berries are ready to be picked when they nearly start falling of the vine.

Exposure: Full sun

Height: Grows 6-8' tall

Spacing: Plant 6-8' apart, bud union should be 1" above soil level

Hardy in: USDA zones 5-7

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
