

About Accreditation Certification

for ReliaBilt Windows and Sliding Patio Doors

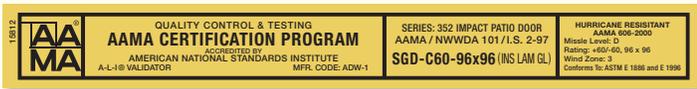

<http://reliabilt.atriumwindows.com>

At ReliaBilt, we take great pride in the quality of our products. And they're put to the test. All of our products are independently tested and rated by certified, outside groups. These certification agencies are third party organizations that manage the process by which a fenestration manufacturer like ReliaBilt can obtain independent certification of their products' performance and quality.

We are proud that many ReliaBilt products will continue to be certified by AAMA (American Architectural Manufacturers Association) and excited that other ReliaBilt products will now be certified by NAMI (National Accreditation & Management Institute). Though two different groups, both AAMA and NAMI accreditation programs are both comparable and well-respected within the industry. We are striving for a gold label that signifies the highest quality no matter where our product is tested!

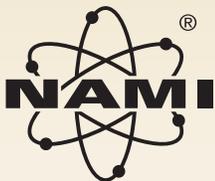

Proven performance: every ReliaBilt product has an authorized certification label. When each ReliaBilt submitted product is tested and verified, approved authorization for product certification is initiated and labels are then created for the production line units of that particular product. Certification labels from either AAMA or NAMI independent laboratories list our manufacturing code, specific identification, series number with a rating designation of: product type, performance class, performance grade, and size tested.

Examples of an AAMA authorized certification program label

Example of a NAMI authorized certification program label

The two certified independent laboratories AAMA and NAMI used by ReliaBilt Windows & Doors adhere to the same testing guidelines:

- Both certify according to the specifications of the North American Fenestration Standard - NAFS (AAMA/WDMA/CSA101/I.S.2/A440-111)
- Both are recognized by NFRC for thermal product certifications
- Both are recognized by the Florida Building Commission (FBC) and the Texas Department of Insurance (TDI)
- Both are accredited by ANSI (American National Standards Institute)
- Both are approved/recognized as independent third party fenestration certification agencies in the International Building Code (IBC) and International Residential Code (IRC)
- Both require that product be tested at accredited, independent testing laboratories
- Both perform manufacturer site inspections two times a year

All performance-certified ReliaBilt windows and doors are also listed in the independent lab's certified products directory of tested products. The authorized performance label is then applied to the product, ensuring that the ReliaBilt product meets or exceeds the product rating.

ReliaBilt Windows & Doors, performance-tested for more than the every day.
