

## How to Choose Vanity Light with Right Size

To choose the right size of a vanity light, we recommend the width of your vanity light should be about 3/4 of the mirror's width or several inches shorter than the vanity. Hang lights in multiples, change up your style with sconces or mount lights upward for ambient lighting.

### Vanity Light Size Guide

Lights 20 in or smaller: For 24-in vanities

Lights 20 – 30 in: For 36-in vanities

Lights 30 in or Larger: For 48-in vanities

Bathroom Wall Sconces: For 60-in vanities with several mirrors

### More Tips

**Measure Your Space:** Start by measuring the width of your mirror, if you have one, or the width of the vanity itself. Knowing this will help you decide the ideal size of the vanity light. Also, consider the height of your vanity and the overall space available in your bathroom.

**Determine Light Width:** Ideally, your vanity light should be at least 75% the width of your mirror and not extend over its edges. So, if your mirror is 30 inches wide, your vanity light should be around 22-28 inches wide. However, if you don't have a mirror and are centering the light over the vanity, choose a fixture that is around one-third the width of the vanity.

**Think About the Number of Lights:** If you have a wider vanity or mirror, consider a vanity light with multiple lights. A three-light fixture is a standard size, but you might choose one with more lights for larger vanities.

**Keep Proportions in Mind:** The size of your vanity light should match the proportions of your bathroom. For instance, a large vanity light might overwhelm a small bathroom, while a small light might look out of place in a large bathroom.

**Consider the Bulb Size:** The size of the bulbs your fixture will use is also crucial. Bigger bulbs might provide more light but consider whether they will look proportionate to your vanity and mirror.

Remember, while size is important, it's not the only thing to consider when choosing a vanity light. You should also think about the style, finish, and type of light the fixture will provide, as well as how it will fit into your overall bathroom decor.
