

How to measure for replacement cabinet drawer boxes

To start, you are going to need the height, width and depth of the drawer box.

Remove your drawer box first to make measuring easier. If you want to replace the exact same size drawer box and plan on using your existing drawer glides, we need you to **measure the outside dimensions** of the drawer box (width and depth). Then turn the drawer box on its side and measure the height. Only measure the drawer box dimensions and do not add the dimension of the drawer front or drawer glides.

Height

Width

Depth

If you need custom size drawer boxes that are not available on the Lowe's website, please visit your local Lowe's store and see a kitchen cabinet specialist to order your custom size.
