Safety Information

1. To reduce the risk of electric shock, ensure the electricity has been turned off at the circuit breaker or fuse box before beginning.
2. All wiring must be in accordance with the National Electrical Code ANSI/NFPA 70 and local electrical codes. Electrical installation should be performed by a qualified licensed electrician.
3. The outlet box and support structure must be securely mounted and capable of reliably supporting 50 lbs. (22.7 kg). Use only UL Listed outlet boxes marked "Acceptable for Fan Support of 50 lbs. (22.7 kg) or less."
4. The fan must be mounted with a minimum of 7 ft (2.1 m) clearance from the trailing edge of the blades to the floor.
5. Do not operate the reversing switch while the fan blades are in motion. You must turn the fan off and stop the blades before you reverse the blade direction.
6. Do not place objects in the path of the blades.
7. To avoid personal injury or damage to the fan and other items use caution when working around or cleaning the fan.
8. Electrical diagrams are for reference only. Light kits that are not packed with the fan must be UL-listed and marked suitable for use with the model fan you are installing. Switches must be UL General Use Switches. Refer to the instructions packaged with the light kits and switches for proper assembly.
9. After making electrical connections, spliced conductors should be turned upward and pushed carefully up into the outlet box. The wires should be spread apart with the grounded conductor and the equipment-grounding conductor on one side of the outlet box.
10. All setscrews must be checked and retightened where necessary before installation.

WARNING: To reduce the risk of personal injury, do not bend the blade brackets (also referred to as flanges) during assembly or after installation. Do not insert objects in the path of the blades.

WARNING: To reduce the risk of fire, electric shock or personal injury, mount to outlet box marked "acceptable for fan support of 50 lbs. (22.7 Kg) or less" and use screws provided with the outlet box.

WARNING: To reduce the risk of fire or electric shock, do not use this fan with any solid-state speed control device.

WARNING: To avoid possible electrical shock, turn the electricity off at the main fuse box before wiring. If you feel you do not have enough electrical wiring knowledge or experience, contact a licensed electrician.

WARNING: Electrical diagrams are for reference only. Optional use of any light kit shall be UL-listed and marked suitable for use with this fan.

WARNING: Remove the rubber motor stops on the bottom of the fan before installing the blades or testing the motor.

Warranty

The supplier warrants the fan motor to be free from defects in workmanship and material present at time of shipment from the factory for a lifetime after the date of purchase by the original purchaser. The supplier also warrants that all other fan parts, excluding any glass or acrylic blades, to be free from defects in workmanship and material at the time of shipment from the factory for a period of one year after the date of purchase by the original purchaser. We agree to correct such defects without charge or at our discretion replace with a comparable or superior model if the product is returned. To obtain warranty service, you must present a copy of the receipts proof of purchase. All costs of removing and reinstalling the product are your responsibility. Damage to any part, such as by accident, misuse, improper installation or by affixing any accessories, is not covered by this warranty. Because of varying climatic conditions this warranty does not cover any changes in brass finish, including rusting, pitting, corroding, tarnishing or peeling. Brass finishes of this type wear best when protected from varying weather conditions. A certain amount of "wobble" is normal and should not be considered as a defect. Servicing performed by unauthorized persons shall render the warranty invalid. There is no other express warranty. Hereby disclaims any and all warranties, including but not limited to those of merchantability and fitness for a particular purpose to the extent permitted by law. The duration of any implied warranty which cannot be disclaimed is limited to the time period as specified in the express warranty. Some states do not allow a limitation on how long an implied warranty lasts, so the above limitation may not apply to you. The retailer shall not be liable for incidental, or special damages arising out of or in connection with product use of performance except as may otherwise be accorded by law. Some states do not allow the exclusion of incidental or consequential damages, so the above exclusion or limitation may not apply to you. This warranty gives specific legal rights, and you may also have other rights which vary from state to state. This warranty supersedes all prior warranties. Shipping costs for any return of products as part of a claim on the warranty must be paid by the customer.

Pre-Installation

SPECIFICATION

Size	speed	Volts	Amps	Watts	RPM	CFM	Net Weight	Gross Weight	Cube Feet
62"	1	120	0.081	8.7	92	4892	7.01KG (15.45lbs)	8.42KG (18.56lbs)	2.40 cu.ft
	2		0.108	12	100	5122			
	3		0.134	15.1	108	5499			
	4		0.178	20.2	120	6157			
	5		0.220	25.3	131	7007			
	6		0.290	34.5	143	7105			

The above data is for reference only. The motor speed of each ceiling fan varies.

NOTE: These are approximate measures. They do not include the amps and wattage used by the light kit.

Specifications & measurements shown are subject to $\pm 5\%$ variations.

TOOLS REQUIRED

Phillips
screwdriver

Flat blade
screwdriver

Step
ladder

Wire
stripper

Electrical
tape

Pre-Installation (continued)

HARDWARE INCLUDED

AA	Blade attachment screws M5x12mm (Spare screws)	1
BB	Fan blade screw gasket $\Phi 12 \times \Phi 5 \times 2 \text{mm}$ (Spare spacers)	1
CC	Balanced parts package	1
DD	Expansion screws M6x60mm	2
EE	Wooden tooth screws M5x30mm +M5 Rubber plug	1
FF	Rubber gaskets $\Phi 10 \times \Phi 4 \times 2 \text{mm}$ (Spare spacers)	1
GG	Lamp tray fixing screws M4x8mm (Spare screws)	1
HH	Machine screw, M4x25	1
II	Terminal caps	3

PACKAGE CONTENTS

A	Fan-Motor Assembly	1 pc	B	Blades	6 pc
C	Lamp cover	1 pc	D	LED light kit	1 pc
E	Controller /Receiver	1 pc			
F	Mounting bracket	1 pc	H	Canopy cover	1 pc
G	Canopy	1 pc	I	Motor collar cover	1 pc
K	30. 5cm Downrod	1 pc			

Remote Control Wiring Diagram

- ☐ Connect the wire which from ceiling fan into the receiver.
- ☐ Connect the wire from the receiver with the wire from the house

Assembly – Standard Ceiling Mount

CAUTION: Be sure outlet box is grounded properly and that a ground wire (green or bare) is present.

Partially loosen screws in slotted holes of the ceiling fan canopy. Remove the other 2 screws (along with the star washers) – save for later use. Twist canopy to remove the hanging bracket.

Install hanging bracket to outlet box using original screws, spring washers and flat washers provided with new or original outlet box. If installing on a vaulted ceiling, face opening of hanging bracket towards high point of ceiling. Arrange electrical wiring around the back of the hanging bracket and away from the hanging bracket opening.

CAUTION: It is very important that you use the proper hardware when installing the hanging bracket as this will support the weight of the fan

ELECTRICAL OUTLET BOX

WARNING: Contact a qualified electrician to replace the outlet box if it is not suitable for ceiling fans

- If there is an existing outlet box, ensure it is clearly marked “Suitable for Fan Support”. If not, it must be replaced with an approved one.
- Secure the outlet box (or make sure the existing box is secured) directly to the building structure. Use appropriate fasteners and building materials. Wood joist and outlet box must be able to support a minimum of 50 pounds.
- Fig. 1 and 2 are examples of different ways to mount the outlet box in different situations. A hanger support bar may be required

Assembly – Hanging the Fan

Install downrod assembly

- take of the lockpin and hairpin clip
- Carefully feed the motor wires up through the downrod, thread the downrod into the collar.
- Slip coupling cover, canopy cover, and canopy onto the downrod
- Align the holes and replace hanger pin and locking pin.
- Tighten the two collar setscrews.

Hang the fan

- Lift the fan motor assembly up to the mounting bracket and seat the hanger ball in the mounting bracket socket. Rotate the fan motor assembly until the check groove drops into the registration slot and seats firmly. The downrod should not rotate if the is done correctly.

Install remote receiver

- Insert the receiver into the mounting bracket with the flat side of the receiver facing the ceiling.

Install canopy

- Ensure the loosened screws is inserted into the key holes on the mounting bracket.
- Carefully raise the canopy up to the mounting bracket. Rotate the canopy clockwise until it is locked. Place the canopy cover (if applicable).
- Secure the canopy by replacing the screws previously removed and tightening the screw previously loosened

Installation – Blade and Light Kit

- First, remove the pre-installed fan blade fixing screws on the main unit and store them well and do not discard them.
- Attach a blade to the fan motor housing by first inserting the blade into the slot in the side of the fan motor housing.
- Insert a screw into the bracket. Repeat for the two remaining screws.
- Tighten each screw securely.
- Repeat these steps for the remaining blades.

- Installing the light kit by screws
- Plug in the input line and output line of the lamp.
- Plug in the light cable group, take out the plastic cable tie in the accessory bag, shorten the light source cable group, and then tie it tightly with the cable tie.

- Turn the lamp cover clockwise until it stops

Fan Balance

- Put the clip in the center of a blade. Turn on the fan and if the shade persists, put the clip in another blade until the shade is reduced. Then this blade will need the counterweight

- Please the clip on the blade that needs the counterweight and try the best place to place it, from the center to the tip of the blade, until the wobble disappears

- Paste the counterweight on the surface of the blade which near the clip, remove the clip and test the fan. If it keeps staggering, put another counterweight. If it gets worse, try another area to place it. Please try patiently until the fan is balanced

Care and Cleaning

WARNING: Make sure the power is off before cleaning your fan

- Because of the fan's natural movement, some connections may become loose. Check the support connections, brackets, and blade attachments twice a year. Make sure they are secure. It is not necessary to remove the fan from the ceiling.
- Clean your fan periodically to help maintain its new appearance over the years. Do not use water when cleaning, as this could damage the motor or the wood, or possibly cause an electrical shock. Use only a soft brush or lint-free cloth to avoid scratching the finish. The plating is sealed with a lacquer to minimize discoloration or tarnishing.
- You can apply a light coat of furniture polish to the wood for additional protection and enhanced beauty. Cover small scratches with a light application of shoe polish.
- You do not need to oil your fan. The motor has permanently – lubricated sealed ball bearings.

Troubleshooting

Problem	Solution
The fan will not start	□ Check the main and branch circuit fuses or breakers □ Check the line wire connections to the fan and switch wire connections in the switch housing □ Check the battery in the remote control □ Ensure you are in the normal range of 10-20 feet □ Turn the power off and ensure that the dip switch settings are the same on the remote control and receiver
The fan is noisy	□ Ensure all motor housing screws are snug. □ Ensure the screws that attach the fan blade bracket to the motor hub are tight. □ Ensure the wire nut connections are not ratting against each other or the interior wall of the switch housing. □ Allow a 24-hour "breaking in" period. Most noises associated with a new fan disappear during this time. □ Ensure the screws securing the light kit and ensure the lamp cover is secure. □ Ensure the canopy is a short distance from the ceiling. It should not touch the ceiling.
The fan wobbles	□ Check that all blade and blade arm screws are secure. □ Most fan wobble problems are caused when blade levels are unequal. Check this level by selecting a point on the ceiling above the tip of one of the blades. Measure from a point on the center of the blade to the point on the ceiling. Rotate the fan until the next blade is positioned for measurement, and measure from the same point on each blade to the ceiling. Repeat for each blade. Any measurement deviation should be within 1/8 in. Run the fan for ten minutes. If the fan continues to wobble please contact Customer Service and a balancing kit will be sent to you at no charge.

Use of Remote Control

Tips:

1. The remote and controller/Receiver were setup to match each other in the manufacture, so that you can use the remote to control the fan and light.
2. While the remote can't control the fan or light, please check whether the battery is good or not.
 - 2.1 connection good or not
 - 2.2 A new batteries needed or notIf the batteries are good, but the remote can not control fan or light, please re-setup the remote to match the fan.
3. Too low battery voltage will affect the remote control distance and may cause remote fail. Please replace the battery in time
4. When not use for a long time, please take out the batteries of the remote control.
5. Setup procedure and button:
 - 5.1 Power off
 - 5.2 Keep OFF for more than 1 Minute
 - 5.3 Power on, then press  buttons immediately, for 5 seconds
 - 5.4 You will hear a beep, that means SETUP successfully.
 - 5.5 You can use the remote to control the fan and light
6. Make sure children don't play the remote
7. For more assistants, please contact us for support.
