**DEER
SCRAM™**

GRANULAR REPELLENT

EASY TO APPLY INSTRUCTIONS

Deer Scram™ Granular Repellent can be applied as a protective perimeter barrier or it can be evenly spread over a garden bed or flowerbed. **Deer Scram™** should be lightly re-applied immediately following a heavy downpour of rain.

For individual plants and bushes, sprinkle **Deer Scram™** liberally around the plants and bushes to be protected.

For plots or flower beds, sprinkle liberally in a 16" strip surrounding the entire bed or plot. Use interior strips for larger plots. Application should be applied 18" from the edge of the plants & be heavy enough so as to visibly cover the ground around the plants and shrubs to be protected.

If you believe you are in a highly aggressive deer area, increase the 16" strip to approx. 24" and/or increase the application amount.

Because Deer Scram is made from all natural organic ingredients, it is completely suitable to use for organic gardening and is not water soluble. We do recommend washing fruit and vegetables before eating.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com
