

INSTALLATION INSTRUCTION

R1 Two-Piece Toilet

NOTE: Drawings may not exactly define contour of the product.

PRIOR TO INSTALLATION:

- Inspect toilet to ensure no damages have occurred while in shipping.
- Observe all plumbing and building codes in accordance with your state and local requirements.
- Remove the old toilet.
- Make sure mounting surface is **CLEAN** and **LEVEL**.
- The above drawing is not to scale and is for illustrative purposes only. Please refer to the product dimension or our website: www.maceratingflo.com.
- Two people are recommended to install and move this product.
- **FRAGILE GOODS!** To avoid breakage and possible injury, handle with care.

General Recommendations:

Please read the installation instructions thoroughly before installing the toilet.

The step-by-step guidelines in the installation instructions are a general reference for installing a MaceratingFlo Toilet. Should there be any discrepancies, MaceratingFlo cannot be held liable. It is recommended to install all MaceratingFlo Products by hiring a licensed professional.

Be sure to use proper tools and always wear proper personal safety accessories for your protection.

Water Supply Kit

PARTS LIST

- MT000T01 Toilet Bowl & Tank, Slow-close Toilet Seat, Flush Lever, Extension Pipes and Installation Accessories

BEFORE INSTALLATION

1. Ensure that your bathroom has a draining exit and cold water supply line in place.
2. In order for your new toilet to fit correctly, please check the following dimensions:
 - ①. "Rough-in (RI)", the distance between the finished floor and the center of the wall draining exit, must be about 7 inches
 - ②. The PVC-U pipe of the wall draining exit should extend beyond the finished wall by about 0.4-0.5 inches
 - ③. Water supply should be approximately
 - a. 7.9-9.8 inches to the left (facing the bowl) from the toilet, and
 - b. and approximately 5.9-7.9 inches above the finished floor
3. Water Supply: If your cold water line is through the wall, install an Angle Stop. If it is through the floor, install a Straight Stop.

START INSTALLATION

STEP 1. Old Toilet Removal (If applicable) :

1. Shut Off Water Supply: Ensure the water supply valve is fully turned off.
2. Flush And Empty: Depress the flush handle to drain water from the tank. Then manually remove any remaining water from the tank or bowl using a sponge or towel.
3. Disconnect The Supply Line: Carefully detach the water supply line connected to the tank.
4. Detach The Toilet: First, take off any decorative caps on the base of the toilet. Next, unscrew the nuts that fasten the toilet to the floor.
5. Lift Away The Toilet: With a firm grip, lift the toilet off its base and set it aside or dispose of it according to local regulations.
6. Prepare For New Installation: Remove the old toilet bolts from the toilet flange. Clean the base area thoroughly ensuring any residues like old wax or putty are removed.

STEP 2. Make Sure to Measure and Label the Following

- ①Center distance from the ground.
- ②Distance of the outfall from the wall.
- ③Diameter of the outfall.
- ④Distance of the center from the wall.

NOTE:

If the toilet's drain exit cannot be connected to the wall drain exit, please use an "Extension Pipe", and ensure that there is no leakage at the junction. You can also cut the "Extension Pipe" as needed.

Flexible Extension Pipe

Rigid Extension Pipe

NOTE: Ensure that the mounting surface is clean and level before installing the new toilet.

STEP 3. Determine the Toilet Installation Location and Mount the Toilet

1. Place the toilet at the designated spot.
2. Mark the points at the mounting holes, then remove the toilet.
3. Drill the mounting holes at the marked points, then put the toilet in place.

4. Connect the toilet to the drain outlet or the macerator pump.
5. Insert the components to mount the toilet as illustrated. Use a wrench to tighten if needed. (Do not overtighten.)

NOTE:

Position the macerator pump at the intended spot before mounting the toilet if needed.

NOTE: Drawings may not exactly define contour of the product.

STEP 4. Water Tank Assembly

1. Position the tank-to-bowl gasket over the tank nut, ensuring there is no gap between the gasket and the tank.
2. Insert the two tank bolts into the tank mounting holes.
3. Lift the tank and guide the bolts to align the tank with the bowl.
4. Place the washers and nuts as illustrated.
5. Alternately tighten the nuts to secure the tank to the toilet bowl.

Watch Installation Video of:

- STEP 4: Tank-to-Bowl Bolts
- STEP 5: Flush Lever
- STEP 8: Toilet Seat

STEP 5. Install Flush Lever

1. Unscrew the plastic nut from the lever arm by turning it clockwise.
2. Insert the lever arm through the square hole on the tank's front side.
3. Secure the lever arm by tightening the plastic nut counterclockwise.
4. Attach the chain from the flapper to the trip lever arm.

Ensure the chain length allows the flapper to fully raise when the trip lever is activated.
Retain 5 or 6 extra chain links for potential future adjustments.

STEP 6. Connect the Toilet with the Drain Outlet/Macerator Pump

Materials Needed:

- Macerator pump (if applicable)
- PVC pipe or flexible hose (as specified by the pump's manual if using one)
- Jubilee clips or hose clamps
- PVC primer and cement (if using PVC pipe)
- Rubber gloves
- Adjustable wrench
- Screwdriver

NOTE: Always turn off the electricity supply when working close to electrical devices, such as a macerator pump, to ensure safety. Additionally, it's recommended to wear rubber gloves when working with sewage systems to maintain hygiene.

1. Attach one end of the rigid or flexible extension pipe to the toilet's outlet. Attach the other end of the pipe to A or B as shown below.

- ① Ensure the pump is properly positioned before connecting.
(Note: Place the clamp to the toilet outlet before connecting the EXTENSION PIPE.)
- ② Attach the other end of the extension pipe to the pump's inlet.
- ③ Secure the clamp and tighten it with a screwdriver.

NOTE:

For more details about connecting the R1 toilet to the Macerator Pump, please scan the QR code below to read the R1 Macerating Toilet system installation guide.

STEP 7. Install Water Supply Pipe and Test Flush

1. Connect the cold water line to the tank using either a straight or angle stop. First, place the washer, followed by the plastic nut, onto the tank end of the connecting pipe. Adjust the pipe to align with the inlet hole on the water regulator and tighten all coupling nuts securely.

CAUTION:

Avoid using plumber's putty, pipe dope, or any other sealants on the water supply connection to this tank. If a leak occurs after hand-tightening, consider replacing the supply line. If the leakage persists with a new supply line, it may be necessary to replace the fill valve.

2. Activate the Macerator Pump (if applicable): If using a macerator pump, turn it on to verify its functionality. It should activate and deactivate without issues.
3. Test Flush: Conduct a test flush on the toilet, ensuring everything flows correctly and the pump, if used, activates as intended.
4. Inspect for Leaks: After the test flush, check all connection points for potential leaks. Tighten any loose connections further or consult the manufacturer's guidelines if issues persist.

STEP 8. Install Toilet Seat

1. Insert the expansion bolt into the bracket
2. Then put them into the hole of the toilet bowl and adjust the position of the bracket correctly (NOTE: The spring side rests on top)
3. Tighten the expansion bolt with the cross screwdriver
4. Placing the toilet seat ring horizontally into the bracket
5. Finally, adjust the position of toilet seat ring to align it with bowl

TROUBLESHOOTING GUIDE

WARNING

When servicing or replacing any components, be sure the water supply is shut off and the toilet is flushed.

SYMPTOMS	PROBABLE CAUSES	REMEDIES
Does not flush	- Water supply valve closed. - Supply line blocked. - Flush valve chain too loose or disconnected.	- Open valve and allow water to fill tank. - Shut off water supply, disconnect supply line and inspect its accessories. - Readjust chain length as required.
Poor flush	Supply valve partly closed.	Open supply valve fully. Be sure that proper supply tube size is used.
	Partially clogged trapway and/or drain pipe and/or vent.	Remove obstruction. Consult a plumber if necessary.
	Low water level in the tank.	Adjust the fill valve to raise water level in tank. (Review Figure 1 on Page 11, or QR code below) 
	Flush volume too low.	- Adjust the position of the chain hook on the chain. - Detach the chain hook from the lever, reposition it on the chain, and then reattach the hook to the correct hole on the flush lever.
Toilet leaks	- Poor supply line connection. - Poor bowl to tank/wall connection.	- Review Step 7 of installation procedure. - Review Step 2 through 5 of installation procedure.
	Flapper seal leaking or deformed.	Clean debris from seal surface. Replace flapper seal as needed.
Toilet does not shut off		

TIP: Please remember to restore the clips after adjustment.

LIMITED WARRANTY COVERAGE

TWO YEAR LIMITED WARRANTY

MaceratingFlo products are crafted with superior materials and impeccable workmanship, offering our customers reliable and long-lasting products. If defects in materials or craftsmanship are detected under standard use within the first two years of installation, MaceratingFlo will either supply replacement parts at no charge or, if deemed necessary, replace the product or its parts, this warranty is exclusive to the original purchaser, and proof of purchase is mandatory for any claim.

We strongly advise all MaceratingFlo product installations be handled by a licensed, professional plumber or contractor. MaceratingFlo won't be held liable for damages or product malfunctions due to incorrect installation, misuse, or if a licensed professional isn't employed for the installation. We won't cover any associated installation or removal expenses.

This Warranty Will Be Voided If:

- The product's installation did not follow our recommendations.
- The product was relocated from its initial installation site.
- The product underwent any modifications from its original condition.
- The product suffered from neglect, misuse, chemical overuse, accidents, or any other damages.

MaceratingFlo does not imply that our products adhere to local building or plumbing codes. Consumers must ascertain local code compliance before and during installation. This warranty is strictly for the original purchaser and first consumer.

MaceratingFlo won't be held responsible for any consequential damages linked to the product's installation, replacement, return, or usage. This includes, but is not limited to, freight charges, labor, downtime, home damages, and other associated costs (e.g., professional services, investigations, audits, legal fees).

This MaceratingFlo warranty clearly delineates our liability. Items not specified in this warranty fall outside MaceratingFlo's responsibility. In states with variations concerning implied warranties, our compliance is ensured.
