VOLE SCRAM™

GRANULAR REPELLENT

EASY TO APPLY INSTRUCTIONS FOR BEST RESULTS: USE A SPREADER

SET YOUR SPREADER SETTING TO 60% OPEN.

Each spreader has holes that dispense product. Because of the variety of spreader styles - look at your spreader's holes' open & close. Typically left is lowest & right is wide open. Middle point is 50%. You may need to adjust for proper coverage as spreader conditions, rate of walk are just some of the variables that can affect the rate of application. Cover the area where vole damage is seen. Extend the coverage to about thirty (30) feet around and beyond the damaged area. For lawn and garden areas of 5,000 or less square feet, we recommend covering the entire area.

Hand sprinkle within damaged garden plots and beds.

Water the area where Vole Scram has been sprinkled or spread for approx. 5 minutes.

Reapply Vole Scram in 14 days after the initial application and then every 30 days or as needed. Heavy or extended periods of rainfall will shorten the effective period.

FOR WINTER USE: To prevent winter damage, apply Vole Scram **TWICE** just prior to estimated first snow. This application should last under winter snow cover until the first opportunity for re-application in the spring.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com
