## GLASS

Cleaning & Care

### THE GENERAL CARE AND CLEANING OF ANY GLASS SINK

For general maintenance, all glass sinks can be regularly cleaned with a mild detergent, warm water, and a soft cloth. Wipe down and dry the sink after each use to protect against hard water, which can create blemishes that are tough to eliminate. For a thorough cleaning after extended use, or to remove stubborn stains, follow the suggestions on the reverse side.

## GLASS

### Cleaning & Care

## CLEANING INSTRUCTIONS

### WATER TEMPERATURE

Extremely hot water could cause a glass sink to crack or shatter. As a general rule, if the water is too hot to the touch, then it is too hot to be in a glass sink.

### SANITIZATION

Glass sinks should be cleaned on a regular basis in order to avoid any mineral or bacteria buildup. With a soft sponge or cloth, scrub the glass with a circular motion. Use a standard glass cleaner, we recommend Windex® or Crystal Rain®, or a mixture of vinegar and water. Rinse and wipe-down with a soft cloth. Avoid abrasive cleaners or scouring pads which may scratch the glass. Be careful when cleaning the exterior of a glass sink as it might have a foil or printed application which could be damaged by scrubbing.

### DAMAGE

Do not store heavy or sharp objects above glass sinks. If they fall, they can scratch or shatter the sink. A chipped or cracked glass sink cannot be repaired.

### HARD WATER

Wiping the sink dry after each use is important in order to avoid spots, especially if you have hard water. Long-standing hard water spots on glass can create mineral stains which cannot be removed.

### FROSTED GLASS

Frosted glass exteriors can be cleaned with standard ammonia-based glass cleaners. Using paper towels, newspaper or an abrasive sponge, wipe the frosted glass sink in a circular motion. Frosted glass is much tougher than "normal" glass due to the process it underwent to achieve its appearance, so it can be scrubbed vigorously.
