

How it Works:

Wick & Grow™ ceramic cover planters are designed to ensure space between the water level and the plant.

- Features a “ledge” inside to rest your plant above the water reservoir.
- Water moves upward through the wick towards the plant roots.
- Never under or over-water again!

How to set up your Wick & Grow™ Planter:

- 1** Fill with water to the indicator line inside the cover planter. This shows the max amount of water your plant needs.

- 2** No need to remove your plant from the grower's pot! Simply place the plant inside the cover planter making sure the wick rests in the water. Check the wick weekly and add water as needed.
