

VanZyverden's
TALL PHLOX RAINBOW DANCER

Phlox produces fragrant, bold-colored bunches of dense bloom clusters in shades of white, pink, purple, blue and reds. Phlox is a pollinator magnet for your summer garden. Pollinators are a vital part of life on planet Earth since they pollinate most flowering plants for them to reproduce. Pollinators do this by transferring pollen from bloom to bloom. Pollinators have been in decline in recent years due to habitat loss and disease.

*Showy blooms that are
great for cut flowers*

Deer & critter resistant

Drought tolerant

About This Variety: Phlox Rainbow Dancer is a long lasting phlox and there any no mistaking it for another phlox. The coloring of this phlox is nearly impossible to describe as its variation of color will vary over time throughout the blooming season. The variety could have more aptly been called Surprise. Better yet, it adds a spicy fragrance to your cut flower bouquet. Tall Phlox, botanically known as Phlox paniculata or commonly as garden phlox, is native to North America. Phlox is a staple in the perennial garden as it mixes easily with other plants and provides extended blooms throughout the summer.

Growing Instructions: Plant Phlox in the spring after all danger of frost has passed in a full sun to partially shaded location in moist but well draining soil. Soil preparation: The ideal soil is porous and drains well and yet still holds enough water for the roots. If your soil is heavy clay and drains slowly, or very sandy and does not hold water, add organic soil amendments (peat moss or ground bark). Spread a 3-4" layer of soil amendment, add fertilizer and incorporate together into the soil to a depth of 10". To plant: Dig a hole 1-2" deep in a partially sunny (at least 6 hours of direct sun), well drained location. Place the phlox in hole with roots pointed down and space 8-24" apart depending on variety. Cover with soil and water. Mulch in extreme climates.

Care Tip: Taller blooms may need staking.

Blooms: Summer to Fall

Exposure: Full Sun to Partial Shade

Height: Grows 30-36"

Spacing: Plant 18-24" apart, 1-2" deep

USDA Zones: Hardy in USDA zones 4-8

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
