

Please note! Please note! Please note!

In order to use the fan lamp better, please pass the mounting screw through the hole on the most side of the cross and fix it to the ceiling, and then install the fan lamp!!!

Dear Customer:

Try to light up before installing. Before installing the lamp, please check the wiring to see if the connection is bad. Please plug in the wire and then power on to test. Power on and try to light up, and then install the lamp after checking it is intact.

Fan light installation manual

In order to ensure safe use, please entrust professionals to install, debug and maintain.

Read before installing fan lights

1、The fan does not rotate

- (1).Check whether there is any problem with the fan power line contact.
- (2).Check whether the fan power supply voltage is normal.

2、The fan is noisy

- (1).Check whether all screws of the fan are tight.
- (2).Check whether the motor generates friction with others when it is running.

Precautions

- 一、The input power of this product is 110V/50Hz.
- 二、If you have insufficient knowledge of electrical appliances, be sure to ask a qualified professional electrician to install it for you.
- 三、Before installing and disassembling the ceiling fan, please turn off the power first. The installation must be in the order of ground wire/fire wire/neutral wire, and the disassembly must be in the order of change/fire wire/ground wire to avoid electric shock.
- 四、When installing the ceiling fan, all parts of the screw must be locked securely.
- 五、When the ceiling fan rotates, no objects should touch the blades to avoid danger.
