Understanding How LEVOLOR® Custom Cellular Shades Help Insulate Your Home

Windows provide a beautiful view to the world outside your home. They also account for a significant amount of your home's heating and cooling costs. A cellular shade complements the beauty of your home decor, while providing important benefits like insulation and eliminating unwanted air flow. LEVOLOR Custom Cellular shades aren't just stylish – they help keep your home more comfortable. Here's how:
Honeycomb Fabric Shape
- The fabric's honeycomb shape traps hot and cold air in cellular pockets reducing air flow into your home.
### Double Cell Fabric Construction
- The Double Cell option features two layers of cells between your room and the window, providing an additional insulation barrier.

Energy Shield™ Liner
- Our exclusive Energy Shield™ liner is a thin, clear layer inside the cells that can provide additional year-round insulation.

Factors to consider when selecting your LEVOLOR Custom Cellular Shades:
Solar Heat Gain Coefficient (SHGC)
- How much solar energy passes into your home. A higher SHGC allows the sun to heat the room. A lower SHGC blocks the sun.
R-Value
- Your shade's ability to block cold air in the winter and warm air in the summer. A higher R-value indicates better insulation.

Keeps Warmer

Keeps Cooler
Ultraviolet Protection Factor (UPF)
- How well your shade protects from solar UV rays, which can fade furnishings, floors and artwork. UPF ratings range from 15 (good) to 50 (excellent).

LEVOLOR is a member of the Attachments Energy Rating Council (AERC), whose goal is to help consumers make informed decisions about purchasing window attachments to maximize energy savings. Search "AERC" in your Internet browser for more information.

How To Measure Quickly and Accurately

HEIGHT

Inside Frame

WIDTH

Top of Sill

INSIDE MOUNT

HEIGHT

1 1/2 in. to 3 in. Overlap to top and bottom

Proposed Headrail Location

WIDTH
1 1/2 in. to 3 in. Overlap on each side

Top of Sill

OUTSIDE MOUNT

INSIDE MOUNT (IM) INSTALLATION — For a beautiful framed look

❶ MEASURE WIDTH

Measure to the nearest 1/8 in. between inside surfaces of window frame; at the top, middle, and bottom.

Record the narrowest width of the three.

❷ MEASURE HEIGHT

Measure to the nearest 1/8 in. from inside surface at top of window to top of sill; at the left, middle, and right.

Record the tallest height of the three.

❸ MEASURE DEPTH

Measure exact depth of window casing making note of any obstacles i.e. handles, tracks or cranks that could interfere with the blind or shade function.

Use the shortest depth.

OUTSIDE MOUNT (0M) INSTALLATION — For increased light control and privacy

❶ MEASURE WIDTH

Measure to the nearest 1/8 in. between outermost points where shade is to be placed.

Measurement should overlap each side of window frame by at least 1 1/2 in.

❷ MEASURE HEIGHT

Measure to the nearest 1/8 in. from where top of shade will be located to top of sill, or measure to point of shade reach if no sill.

HELPFUL HINTS

Always use a metal tape measure as cloth may stretch

Measure your window - not your existing blind or shade

Measure each window separately even if they appear to be identical

Check depth to ensure shade will clear any obstacles and can accommodate headrail if flush mount is desired

If you prefer shade not to touch sill, deduct 1/4"

If there is no sill, measure height to point where shade is to reach

NOTE: Take all measurements to the nearest 1/8 in. **DO NOT** take any deductions. The factory will make the necessary adjustments to help ensure your window covering operates smoothly.

Two Shades on One Headrail

Three Shades on One Headrail

WINDOW COMPONENTS TERMINOLOGY

• Collectively, the sill and jambs are called the "window casement" or "frame".
INSIDE MOUNT

• Shade fits within window opening.

• Great for windows with beautiful trim.
OUTSIDE MOUNT

• Shade mounts outside window opening.

• Increased light control and privacy.
TWO SHADES ON ONE HEADRAIL

• Provides the clean appearance of a single shade with the ability to operate each shade independently.

• Can be mounted inside or outside.

SIDE MOUNT–NOT ILLUSTRATED

• Used primarily when conventional mounting will not work—for example, in an arched window opening.
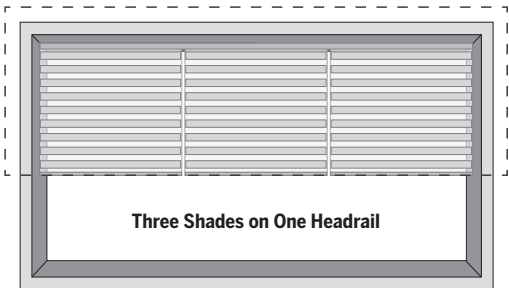

THREE SHADES ON ONE HEADRAIL

• Provides the clean appearance of a single shade with the ability to operate each shade independently.

• Can be mounted inside or outside.

How to Measure Multiple Shades on One Headrail (2-on-1 or 3-on-1 Headrail)

INSIDE MOUNT (IM) INSTALLATION — For a beautiful framed look

❶ MEASURE WIDTH

Total Shade Width — Measure to the nearest $\frac{1}{8}$ in. between inside surfaces of window frame; at the top, middle, and bottom.

  Record the narrowest width of the three.

Left Shade Width — Measure the width that you want the left shade to cover.

  Order this shade first when placing your order.

Right Shade Width (for 3-on-1 only) **—** Measure the width that you want the right shade to cover.

❷ MEASURE HEIGHT

Overall Shade Height — Measure to the nearest $\frac{1}{8}$ in. from inside surface at top of window to top of sill; at the left, middle and right.

  Record the tallest height of the three.

❸ MEASURE DEPTH

Measure exact depth of window casing making note of any obstacles i.e. handles, tracks or cranks that could interfere with the blind or shade function.

  Use the shortest depth.

OUTSIDE MOUNT (0M) INSTALLATION — For increased light control and privacy

❶ MEASURE WIDTH

Overall Shade Width — Measure to the nearest $\frac{1}{8}$ in. between outermost points where shade is to be placed.

  Add an additional 3 in. to 6 in. to total width for maximum privacy.

Left Shade Width — Measure the width that you want the left shade to cover.

  Order this shade first when placing your order.

Right Shade Width (for 3-on-1 only) **—** Measure the width that you want the right shade to cover.
❷ MEASURE HEIGHT

Overall Shade Height — Measure to the nearest $\frac{1}{8}$ in. from where top of shade will be located to top of sill, or measure to point of shade reach if no sill.

2-ON-1 & 3-ON-1 HELPFUL NOTES:

- Order the left shade first when placing order
- Each shade operates separately
- There will be a gap between the fabric on the left and right shades to operate independently
- Fabrics cannot be seamed or overlapped
- Always use a metal tape measure as cloth may stretch
- Take all measurements to the nearest $\frac{1}{8}$ inch. DO NOT take any deductions
- The factory will make the necessary adjustments to help ensure your shade operates smoothly
- Panel sizes follow single shade size limits, see critical dimensions page for details

2-ON-1 HELPFUL NOTES:

- Available in cordless, corded, and continuous cord loop operating systems
- Top-Down/Bottom- Up and Day/Night options available
- For standard Bottom-Up shades, controls will be located on the left side of the left shade and the right side of the right shade

3-ON-1 HELPFUL NOTES:

- Available in cordless bottom-up operating system only

See critical dimensions section on page 7 for additional information.

Cellular Hardware Color Coordination Guide

Coordinating hardware colors are pre-selected based on fabric color. The color samples below represent headrail, bottom rail, end cap, and tassel colors.

The Fabric Index chart on the following page identifies which hardware color number matches each fabric color.

00110	00275	00292	50001	50002	50003
700114	70121	70134	70136	70145	70147
70152	70800	70802	70803	70804	80001
80006	80012	80031	80120	80166	80204
80310	RE011	BE018	GY051	OR001	

NOTE: The actual color of the hardware may vary from the samples in the color coordination guide.

Color lot variations may occur with fabric and/or hardware due to the process of color application. For the best color match, order all shades for a room at the same time. Pattern availability and color lot match between orders cannot be assured.

Cleaning and Care

All LEVOLOR Cellular Shades are made of 100% polyester and with multiple cleaning options, these easy to care for shades will maintain their beautiful appearance for years to come.

Note: Improper cleaning may void warranty

DUSTING

Use a feather duster for regular cleaning.

VACUUMING

Use a low suction vacuum with a brush- type cleaner attachment; stroke lightly over the shade to clean.

FORCED AIR

Blow away dirt and debris using clean compressed air.

SPOT-CLEANING/STAIN REMOVAL AT HOME

Use warm water and a mild soap, like Woolite® or Scotchgard®, if needed.

PROFESSIONAL INJECTION/EXTRACTION CLEANING

Call local on-site blind/shade cleaner that injects a cleaning solution into the fabric and extracts the dirty solution at the same time. The service is typically performed at home so you do not need to remove your window treatments.
