

Ceramic Kitchen Sink

Eridanus kitchen sinks are made from handcrafted ceramic and undergone strict quality inspection. With the non-porous construction, an Eridanus kitchen sink is easy for a cleanup, but requires decent care for a long-term use.

Cleaning

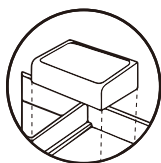

To maintain the appearance of the sink, Eridanus recommend that item be cleaned using a soft cloth and, if necessary, a non-abrasive cleanser, after every use. A simple solution of warm water or a mild liquid non-antibacterial detergent generally does an excellent job. Ensure that the sink is rinsed thoroughly and wiped dry after each clean, as allowing water or cleansers to evaporate will negatively impact the look of the sink.

Maintenance

Avoid storing open containers of household cleaners and chemicals containing chloride such as bleach, acid, and drain cleaners or toilet bowl cleaner beneath the sink. Vapor emission from the chlorides can cause corrosion and pitting to the exposed stainless steel and other metals including faucet water supply lines.

The gloss surface of the sink is susceptible to damage from sharp and metallic objects. The worst offender is metal cutlery. Try to avoid metal objects coming into contact with the surface by using protective plastic bowls, wire grid cutlery holders and drainers with non-abrasive bases.

Never use any form of abrasive cleanser or applicator as they often contain sand or silica that will eventually scratch the surface.

Sound Dampening

It's recommended that a grid/rack be used to protect the surface of your sink.

NOTE: All Eridanus Kitchen Sink comes with a compatible grid.
