

The Science in the Sunshine®: The Sunshine Horticultural tech team formulated these features to help your plants thrive:

On-demand moisture from Canadian Sphagnum peat moss.

Plenty of Air: Perlite provides air spaces for your soil.

Bio-active: Inoculated with mycorrhizae to assist nutrient uptake.

Adjusted pH to support nutrient availability.

RESiLIENCE®: May improve resistance to wilting.

You're in control of the levels and timing of fertilizer applications.

Setting the Standard for Professional Growing For Indoor and Outdoor Plants

Container Size	4" (1 pint)	8" (1 gallon)	12" 5 gallon	2' x 4' x 6" (4 cubic foot)
This 3.0 cubic foot bale will fill approximately	270	33	7	1

**Directions for Use:** Since *Sunshine Mix #4 Aggregate Plus Professional Growing Mix with Mycorrhizae* is compressed for more eco-friendly shipping, you'll need to "fluff" it out (loosen it up) before filling your planting pots. This mix is formulated so containers can be filled dry and then watered after seeding or planting. This mix wets easily and uniformly, eliminating the need for pre-wetting. As with any mix, over-wetting will negatively affect the physical properties of the mix. Never compress any mix too tightly when planting.

**Fertilization:**

- Plants will benefit from a regular feeding program
- Time of year, temperature and type of plant will affect fertilizer requirements
- Consult your local garden center or plant guide to determine a year-round feeding program that meets your specific plant's needs
