

VanZyverden's
TULIP DARWIN HYBRID MIXTURE OF MAMMOTH BULBS

Tulips are the indispensable blooms of the spring garden, as they bring it to life! They are unique in the range of size, shape, and bold color found in almost every color spectrum, that only tulips provide. Tulips are suitable for a wide range of plantings, are excellent in the rock garden, in formal beds, as elegant cut flowers, and for containers. They can be used in nearly any garden design scheme. Flowers are upward facing, with linear to lance-shaped green leaves on the stem. Tulip descriptions can become quite technical, as they are grouped into 15 different divisions, describing the petals, stamens and leaves in detail. Plant several different varieties of tulips throughout the garden to extend the blooming time.

Bigger bulbs produce bigger blooms

Huge blooms

About This Variety: What makes this mixture so unique is the bulb size. We use giant sized, Mammoth, 14/+ bulbs. A size normally not commercially available due to the length of time it takes to grow them and the small supply available each season. Plus, only certain varieties will grow to this size. This mixture is made up of varieties of the Darwin Hybrid class, and they come in brilliantly colored blooms. These tulips are tall, traditionally shaped, and highly prized by gardeners everywhere for their strong stems and huge flowers. Bigger bulbs means bigger blooms.

Growing Instructions: To ensure optimal results, allow adequate space and sunlight, plant at the appropriate depth, and feed with a well balanced fertilizer. Remove the flowers as soon as they fade, but allow the leaves to yellow before removing. Best planted in late fall. Some gardeners treat tulips as annuals. For an informal look, plant in groups in natural swathes or bouquets.

Care Tip: In USDA zones 8-10, refrigerate the bulbs for no less than eight weeks. In the garden, plant them before frost, but not as early as in the northern part of the country. Planting them in a lightly shaded area will keep them cool and prolong blooming.

Exposure: Full sun to partial shade

Height: Grows 18-20" tall

Spacing: Plant 5-9" apart, 5-10" deep

USDA Zones: Hardy in USDA zones 3-7

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
