

CARE INSTRUCTIONS

Avoid direct and continuous exposure to sunlight. Use brushless vacuum. Remove spills immediately; if liquid, blot with clean, undyed cloth by pressing firmly around the spill to absorb as much as possible. For hard to remove stains, professional rug cleaning is recommended. Store in a dry, well-ventilated area. Use of a rug pad is recommended.

THAT NEW RUG SMELL

It's natural for rugs to have an unusual scent the first few days, the result of being rolled tightly and encased in plastic for shipping. A little time and fresh air will neutralize any odors.

WAIT OUT WRINKLES

Packing and shipping may cause temporary creases in rugs, which will fall out after a week on the floor. To expedite the process, try back-rolling your rug before laying it down, and then allowing ample time for the remaining creases to relax.

ROTATE FOR CONSISTENT WEAR

Rugs are meant to last a long time, but rotating can make them last even longer and will allow fading from sunlight to impact the rug evenly. Switch them up from room to room, so one rug isn't constantly in your higher-traffic locations. Use rug protectors under the legs of heavy furniture to avoid flattening of your rug pile.

IT'S BEEN A LONG JOURNEY FROM OUR ARTISANS AROUND THE WORLD TO THE COMFORT OF YOUR HOME. A BIT OF PATIENCE AND SOME REGULAR MAINTENANCE WILL ENSURE THIS PIECE OF FLOOR ART LASTS FOR YEARS TO COME.
