

Model# HT1153LUV, Smart Boost Technology Claims

The features and benefits claiming this heater “reaches a maximum temperature 50% faster and heats up to 20° more than a standard infrared heater”, is substantiated by internal product testing conducted by Lifesmart. The tests were conducted by comparing the product performance of infrared heaters with smart boost technology feature against other leading Lifesmart infrared heater models without the smart boost feature. The testing was performed in an insulated room with the same start temperature. The testing parameters monitored the ambient room temperature and time intervals of both heaters. Based on the below chart results the determination was made to conclude the stated claimed benefits.
