

Please follow these simple steps to install your attic cover:

What You Need:

1. Heavy Duty Staple Gun.
2. Double sided duct tape (optional).
3. Aluminium tape (optional).

Tip: Line your attic hatch with the double sided duct tape to hold the cover in place whilst stapling (optional).

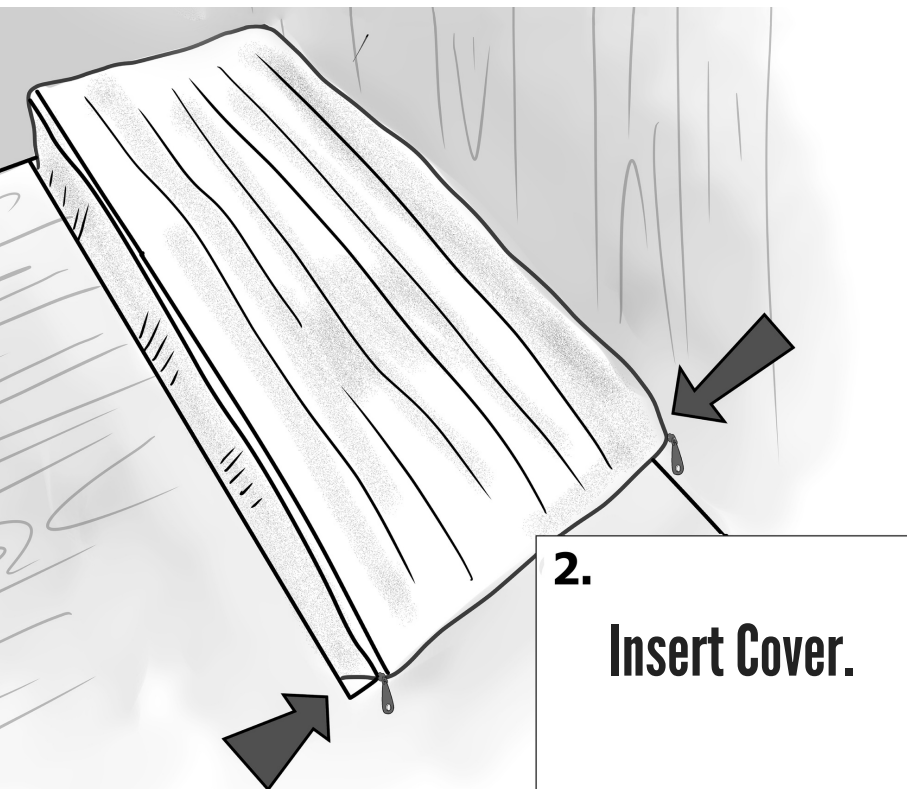

1. Unfold Cover.

Unfold the cover into a long rectangular shape.

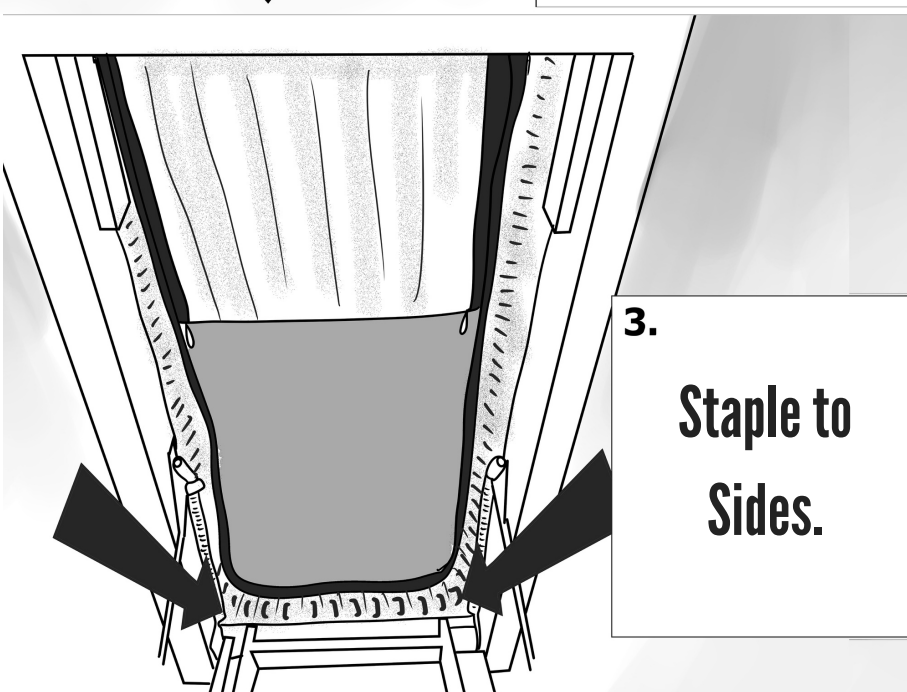

Insert the cover so that it fits snug inside your attic opening, make sure the front of the cover is nearest to where your stairs meet the attic floor.

This ensures easy access to the zipper as you are climbing up. (The front of the cover is where the zipper goes across from one side to the other).

2. Insert Cover.

Staple the cover to the frame of your opening (see illustration). Staple every 6 inches or so to hold the cover in place (if no duct tape was used), then go back and staple in a continuous line. Be sure to go all the way around and staple all sides firmly to the frame. For extra seal, you may use aluminium tape over the stapled areas (optional).

3. Staple to Sides.
