Pop the caster wheels into the holes on the bottom of the saucer.

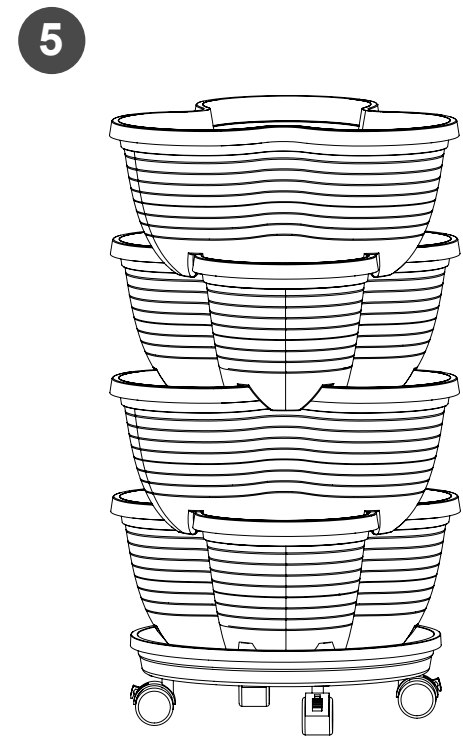

Attach the saucer to one of the planters through the 3 pins

Snap a Self-Watering mesh into each planter

Interlock the 4 planters

Ready for Planting

(With casters the maximum weight should not exceed 55 lbs)

HELPFUL TIPS:

- Plant with appropriate soil based on your live goods.
- Check soil moisture regularly. Top tiers may need watering more regularly.
- To prevent the possibility of root rot of the bottom tier, drain excess water from saucer.
- For additional stability, place a 1" diameter pole (not included) through the middle hole of the vertical garden before adding soil and planting. Then, place the garden in a secure place to prevent tipping (if this is a concern due to weather conditions).
- Rotate vertical garden as needed (based on live goods sun or light exposure needs).
