

SANADROP POND is an ultra modern biostimulant, produced with high technology in the molecular level, that naturally stimulates the microbiological activity in the pond. With chemical composition similar to drinking water, **SANADROP POND**, is made up of a watery solution from inorganic nano particles that alter the speed in which the scattered substances in the environment (oxygen, nutrients, organic matter, etc.) transit.

SANADROP POND will significantly reduce the need to clean your pond and change the water. By using **SANADROP POND**, you will be able to keep your pond clean and clear with a small dose per day.

BENEFITS:

Reduces pond maintenance, keeps it clean and clear, controls algae growth, promotes healthier fish, reduces suspended solids and bottom sediments.

DIRECTIONS FOR USE

DOSAGE (daily): 1lid (7ml)/200gallons

Treats up to 27.000 gallons!

SANADROP POND does the equivalent of:

SLUDGE REMOVER

AMMONIA INHIBITOR

WATER CLARIFIER

ALGAE CONTROLLER

STORE IN A COOL DRY PLACE
