

# Support Brackets

#5141846

#5141847

Fig. 1

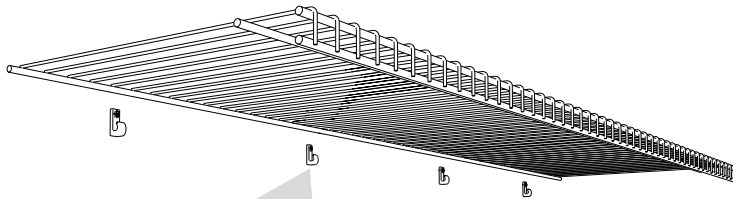

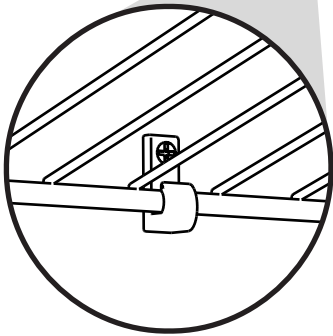

Fig. 2

## 1. Install Wall Clips

Find desired shelf height and mark line using level, then locate studs with stud finder. Install 1 clip at least every 12 inches and at each end of shelf.

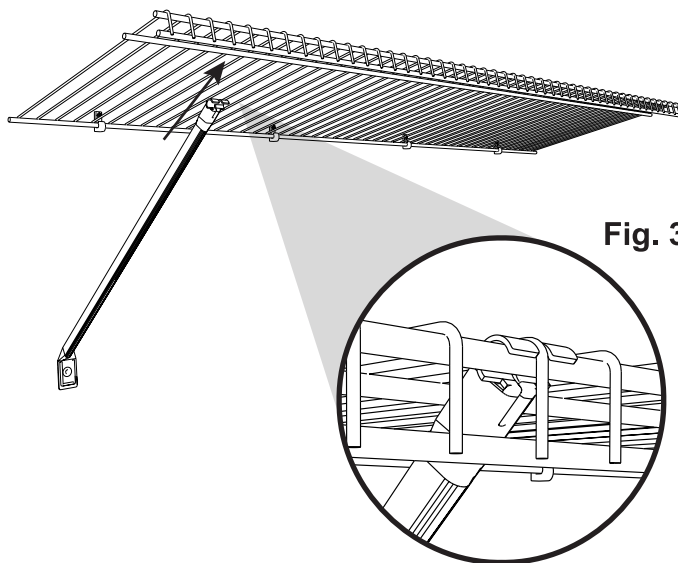

Screwing clip into stud is preferred, use pin anchor when mounting between studs, into drywall. **Fig. 1**

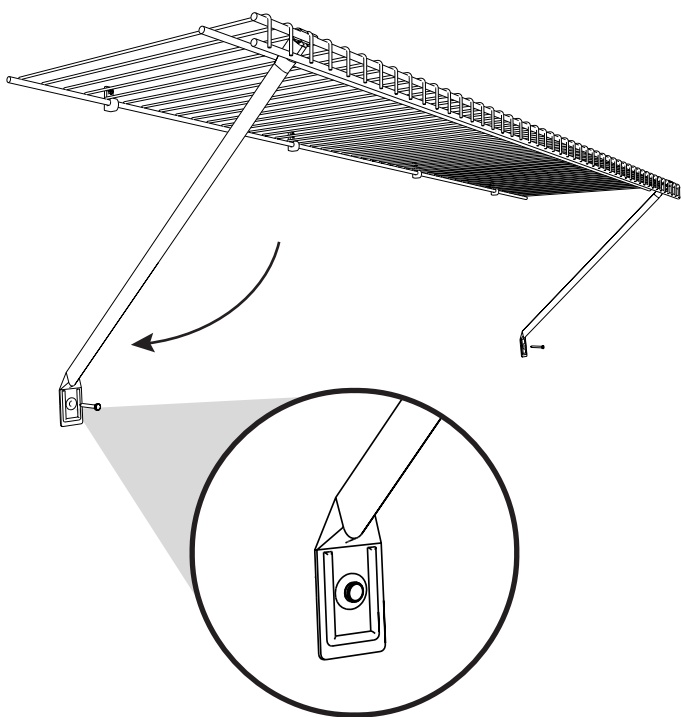

Insert back of shelf into the installed wall clips. **Fig. 2**

## 2. Install Support Brackets

Again, locate studs. Install a support bracket 3 inches from each end of shelf and no wider than 36 inches apart. Mounting to stud is preferred. Hook support bracket onto top horizontal frame with the fork around a grid wire. **Fig. 3**

Fig. 3

### 3. Secure Support Brackets

Push the bracket bottom back toward the wall which locks the bracket fork into the shelf. Be sure the shelf is level. Secure the bottom of the support brackets to the wall. Screwing directly to stud is preferred. Use pin anchor when mounting between studs, into drywall.

#### **Fig. 4**

Pin anchor is supplied with brackets.
