IDEAL BNC Compression Termination Instructions

 Use coax stripper to strip cable so ¹/₄" of conductor and ¹/₄" of braiding are exposed. (45-605 shown)

4) Cable is fully seated when braiding is visible in the clear InSITE® window.

2) Fold back braiding, make sure no braids are touching the center conductor. Straighten conductor if needed. Do not remove foil that is attached to the white dielectric (RG6/6Q)

5) Place assembly in compression tool (30-793 shown) and compress.

3) Center cable over back end of connector and push connector on to cable until fully seated.

6) Verify connector is fully compressed. Clear window should no longer be visible.

RG59 coax is used in this example. General preparation instructions are the same for all IDEAL BNC compression connectors. When working with RG6 Quad cable, the outer foil can be removed, and the inner braiding should be folded down. This makes it easier to push the connector on to the cable.
