

# mandevilla

## LIGHT

Full sun to bright indirect light. Needs 5–6+ hours of light daily to bloom well. Some afternoon shade is helpful in hot climates.

## WATER

Water when the top 2 inches of soil are dry. Keep soil evenly moist but not soggy. Water more often in hot months; reduce slightly in winter.

## FERTILIZE

Feed every 2–4 weeks in spring and summer with a bloom-boosting fertilizer. Pause feeding in fall and winter.
