

Formulated for Low Airborne Dust and Superior Mold Protection

Reduces airborne dust by up to 60% for easier clean-up.

Dust management has never been more crucial on jobsites. ProForm All Purpose with Dust-Tech and ProForm Lite Blue with Dust-Tech are specifically formulated to reduce airborne dust by up to 60%, thereby reducing the impact on indoor air quality. Less dust also saves time with quick and easy clean-up. Both products offer superior mold resistance by achieving the highest mold-resistant scores on industry tests.

ProForm All Purpose with Dust-Tech is an all-purpose joint compound designed for tape application, spotting fasteners and complete joint finishing of gypsum board. It is an excellent product for all phases of finishing, texturing, patching and renovations.

ProForm Lite Blue with Dust-Tech is 30% lighter than conventional joint compounds and is easier to sand. It is designed for use in all phases of finishing gypsum board, including taping, spotting fasteners, and finishing corner bead.

Both ProForm Dust-Tech products have achieved GREENGUARD Gold Certification for low chemical emissions into indoor air during product usage.

ADVANTAGES

- Reduces airborne dust by up to 60% allowing for quick and easy clean-up.
- Resists mold growth – per ASTM G-21 score of 0 (best) and ASTM D3273 score of 10 (best).
- Sands without clogging sandpaper.
- Ready to use right from the container once mixed.
- Low VOC content – less than 2 grams/liter.

Dust-Tech does not clog sanding screens, leaving an even surface for painting.

Other low-dust products can clog, polishing the finish and leading to paint flashing.
