

**TO:** CAMO Partners  
**FROM:** CAMO Product Marketing Team  
**SUBJECT:** Bugle Head Deck Screw Product Updates  
**DATE:** 11/6/25

Dear CAMO Partner,

At CAMO, we're always listening to the pros who rely on our fasteners every day. Based on feedback and our ongoing commitment to continuous improvement, we've made a few updates to our Bugle Head Deck Screw line designed to improve performance on the jobsite.

**Here's what's new:**

- **Line consistency in our 1-1/4" deck screws**  
Our 1-1/4" Bugle Head Deck Screws are now a **#8 diameter gauge**, standardizing the CAMO line, while still maintaining a slim shank for smooth, easy driving.
- **A single driver bit for all common sizes**  
Our 1-1/4", 1-5/8", and 2" Bugle Head Deck Screws now feature a **T-25 drive recess**, without increasing the screw head size. This aligns with the rest of the CAMO Bugle Head line, meaning:
  - Larger drive recess provides greater stability and grip
  - One bit drives them all. No unnecessary bit changes
  - Faster installs with fewer interruptions

To make these enhancements clear at shelf and in the shop, we've refreshed our Bugle Head Deck Screw labels with these same updated specifications and callouts. These changes are now in effect and will begin appearing in stores this November.

As always, our goal is simple: make deck building faster, easier, and better for the pros who choose CAMO. We're proud to continue evolving our products to meet the demands of the jobsite, and we appreciate your partnership and trust in our solutions.

If you have any questions about these updates, our team is ready to help.

Thank you for building with CAMO.

Sincerely,  
**The CAMO Team**

# BUGLE HEAD DECK SCREWS

This product bulletin addresses improvements made to CAMO Bugle Head Deck Screws in **November 2025**.

## PRODUCT ENHANCEMENTS

- 1-1/4" Bugle Head Deck Screws have changed from a #7 to a #8 diameter gauge to standardize the CAMO line, while maintaining a slim shank for easy driving in application.
- 1-1/4", 1-5/8", 2" Bugle Head Deck Screws have been enhanced with a T-25 drive recess, while keeping the screw head size the same. Now our entire line of Bugle Head Deck Screws use the same driver bit.
- These changes are reflected on our updated Bugle Head Deck Screw labels.
- Product changes are in effect and will be seen at shelf this November
