

VanZyverden's
SIBERIAN IRIS SUGAR RUSH

Siberian iris rhizomes produce narrow, grass-like leaves on strong stems. They are a very good naturalizer. Siberian irises are suitable for borders, garden beds, wild gardens, along the edges of ponds, but not for growing in water. They do, however, combine easy care with grace and beauty. They make stunning cut flowers!

award winning variety

new iris variety

re-bloomer

About This Variety: To describe this beauty we will use the hybridizer's comment "Yumm, a watermelon pink amoena with blue and purple wash on the styles, cheery yellow signals, and yellow highlights on the pearly standards. The color of the falls can open several shades darker or lighter depending on the weather. The clump is compact, blooming just above the foliage, 3 buds per stalk."

Growing Instructions: Plants grow best in moist acidic soil but also tolerates drier soil.

Care Tip: Upon receipt, soak your rhizomes in water overnight to jump start growth. Fertilization does them well. It is a good idea to remove spent bloom stalks both for garden appearance and to prevent reseeding. Feed in spring with a nitrogen rich fertilizer.

Exposure: full sun

Height: grows 24-34" tall

Spacing: plant 12-24" apart, just below soil surface" deep

USDA Zones: hardy in USDA zones 4-9

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
