

WARNING: FAILURE TO ADHERE TO THE FOLLOWING NOTICES AND WARNINGS MAY CAUSE SERIOUS PERSONAL INJURY, PROPERTY DAMAGE, OR FIRE HAZARDS AND WILL VOID YOUR LIMITED WARRANTY:

NOTICE: RECOMMENDED HEAT CLEARANCES- For safety precautions, regardless of which Wood, MDF, Cast Stone or Non-Combustible Pearl Mantels product you are mounting, follow heat clearances as stated **by local building codes** and the **manufacturer** of your fireplace insert or stove for **COMBUSTIBLE shelves and surrounds**. For a shelf that has a depth under 9", strictly follow heat clearance instructions from the manufacturer for a 9" depth relative to **COMBUSTIBLE** mantels. Each fireplace insert/stove is unique and will have a different heat output and heat clearance; some may require a heat deflector. Follow the manufacturer's installation instructions for your fireplace insert or stove. It is highly recommended that you consult a professional prior to installation of the fireplace insert or stove.

Included in your carton: Mantel Shelf, Detached Hanger Rail with pre-drilled 2" offset holes, Instruction Sheet, and Certificate of Authenticity.

Not included: Mounting hardware for detached hanger rail. There are many different mounting surfaces, i.e. brick, stone, drywall...and each requires a different hardware for secure attachment. **Always consult a professional.**

Suggested Installation for Mantel Shelves using the included Hanger Rail system

The hanger rail is only a suggested method; your installer may have additional methods for mounting your mantel shelf. Always consult a professional.

Measuring/Mounting

Always attach hanger rail to studs. Always consult a professional.

The Hanger Rail is packed separately in the carton and will attach to your mounting surface. When married to the mantel shelf, it will be locked in place on the wall.

* Mounting hardware for detached hanger rail is **NOT INCLUDED**.

Always attach hanger rail to studs.

Measuring: Measure from bottom of the shelf to the bottom of the hanger rail (1) (See Figure A. below). This measurement is where the bottom of the shelf will be when mounted on the hanger rail.

Centering: Find center point over firebox by measuring from one side to the other, mark the center point on mounting surface, do the same for the hanger rail. (See Figure B. below)

Figure A.

Metal Hanger Rail

Measure from the floor or the hearth to where the bottom edge of the hanger rail will be, remembering to add the distance to the bottom of the shelf (see Fig. A), and mark your recorded measurements on the wall both right and left. Center your hanger rail (see Figure (B)), ensure your pilot holes align to studs and mount the hanger rail so that the bottom of the board is on your recorded marks. Hang your shelf. Some surfaces may not be flush which may require shims or filling of gaps.

Always consult a professional. Always consult a professional before applying paint or stain.

**DRAWINGS ARE FOR
ILLUSTRATIVE PURPOSES ONLY**
