

Installation Procedure

Thank you for choosing our lighting product. To ensure safe use, please take a moment to carefully read these instructions. We also recommend keeping this manual for future reference.

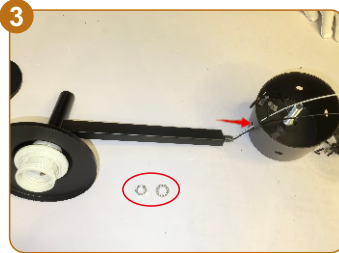

Important Safety Information: 1. Before performing installation or maintenance, ensure the power supply is disconnected. Do not open the enclosure in an explosive atmosphere. Before turning the power on, confirm that the light source and electrical installation are correctly connected.
2. Please bring your own installation tools: wrench, screwdriver, ladder.

Remove the screw cap of the middle column.

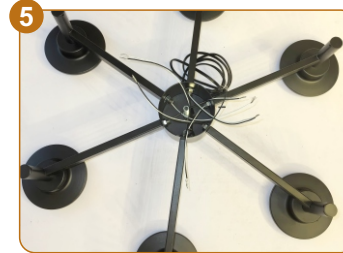

Break it down. It will be used later.

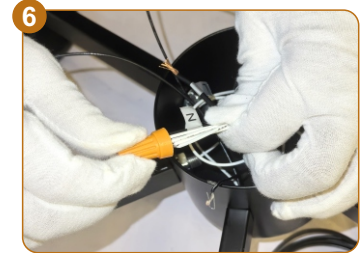

Remove the nuts and washers on the lamp base rod, and insert the wires and the rod into the holes..

Use a wrench to tighten the nut and the washer..

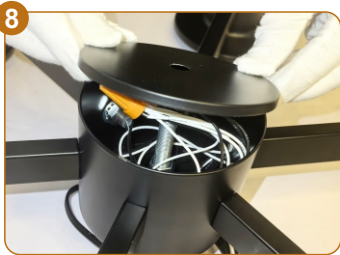

The installed effect.

The white wire and the neutral wire are twisted together, while the black wire and the live wire are twisted together.

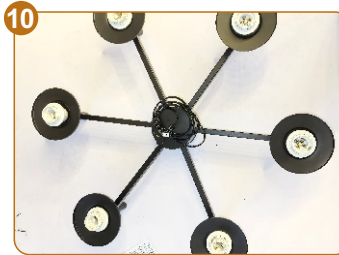

Use the wire connectors in the accessory kit to secure it.

Tidy up the wire and tuck it back into the central column.

Tighten the nut and the cover.

Be careful not to install it upside down.

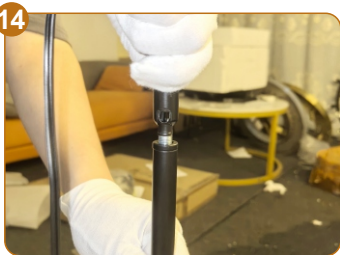

Thread the power cord through the boom.

Choose the number of hanger rods according to your preferred height and tighten them.

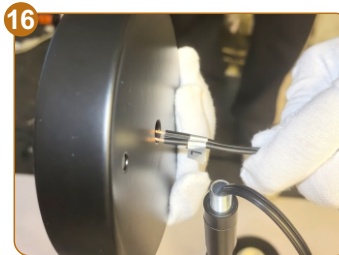

Thread the power cord through the universal joint.

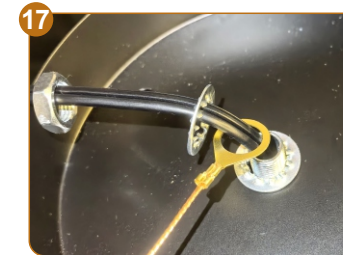

Tighten the universal joint and the hanger rod.

Remove the nut and gasket from the universal joint for later use.

Thread the wire through the ceiling-mounted disc.

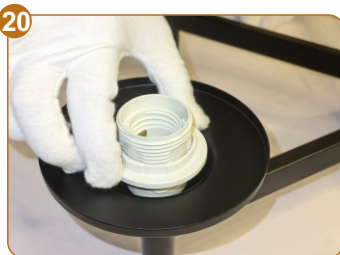

Install the grounding wire as shown in the diagram, ensuring that the grounding wire is clamped between two spacers.

Use a wrench to tighten the nut.

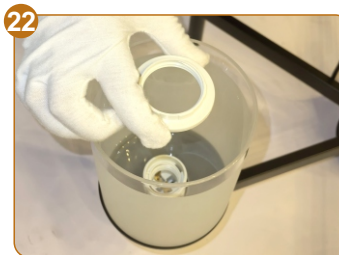

After hanging it on the ceiling, tighten the nut of the ceiling mount.

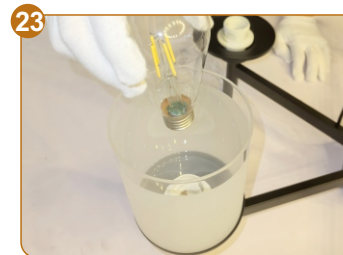

Take out the nut on the lamp holder.

Install the lampshade.

Tighten the nut.

Install it on the ceiling.
