SPECIFIC REPELLENTS FOR
SPECIFIC PESTS

**MOLE
SCRAM™**

GRANULAR REPELLENT

EASY TO APPLY INSTRUCTIONS

For Shaker Container: Cover entire area where Moles are present.

For 10 lb Bag: For best results, Use A Spreader

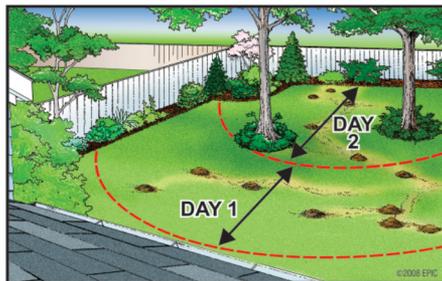

SET YOUR SPREADER SETTING TO 60% OPEN.

Each spreader has holes that dispense product. Because of the variety of spreader styles - look at your spreader's holes' open & close. Typically left is lowest & right is wide open.

Middle point is 50%. You may need to adjust for proper coverage as spreader conditions, rate of walk are just some of the variables that can affect the rate of application.

DAY 1 Apply Mole Scram to 50% of lawn starting at area furthest from where you want moles to exit, water for 20 minutes.

Day 2 Apply Mole Scram to remaining 50% of affected lawn. Again water application for 20 min. Locate mole runways, punch 1" holes every 10 ft. and drop granules into holes, then cover with soil. Also apply to the ends of each runway.

NOTE: Watering (or rainfall) is the key to activation as it draws the oil from the granules into the soil. This action rapidly begins the repelling process.

Please be patient. While Mole Scram is fast acting, it may take up to 1 week for the mole to associate their discomfort & hunger with the **Mole Scram™** treated area.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com
