ASSEMBLY.

NOTE: Assemble with the bolts loosely attached, tighten all bolts completely when the unit is fully assembled. Start by putting the feet (L) in the bottom of the side frames (A). Next assemble (D, G and C) as shown as a unit. Align assembly and insert bolts into one frame of the rack (A) that will be your right hand side of the unit. Align and insert bolts for bottom frame (B).

NOTE: The next two steps may be best done with the unit on its back.

Using the second side frame (A), align the floor section (B) to the bottom most holes and insert bolts. Assemble the side basket/divider (I, H & J) by inserting bolts into the shelf support pole (H). Align the front/back wall assembly (D, C & G) and the basket/divider unit and insert bolts through the tabs in the basket/divider and side frame, into the tubes (D & C).

Placing the unit upright on the floor, align basket (E) and insert the four bolts. Next position the spreaders (F) to the top holes in the side frames and insert bolts.

At this point, go back and tighten all the bolts fully. Snap the hooks (K) onto the top two horizontal tubes at positions as you desire. Hooks can be moved to alternative locations as needed.
