

### TOOLS REQUIRED FOR INSTALLATION (NOT PROVIDED)

#### Installing on Drywall

- Screw driver, level tape measure, pencil, power drill, (anchors and screws included for drywall).

#### Installing on Wood Molding or Wood Studs

- Screw driver, level, tape measure, pencil, power drill, and 1/4" drill bit.

#### Installing on Wallboard

- Screw driver, level, tape measure, pencil, power drill, molly bolt screws or self-drilling anchors.

#### Installing on Concrete, Stone, Brick or Tile

- Screw driver, level, tape measure, pencil, masonry drill and bit, appropriate anchors, plugs or screw.

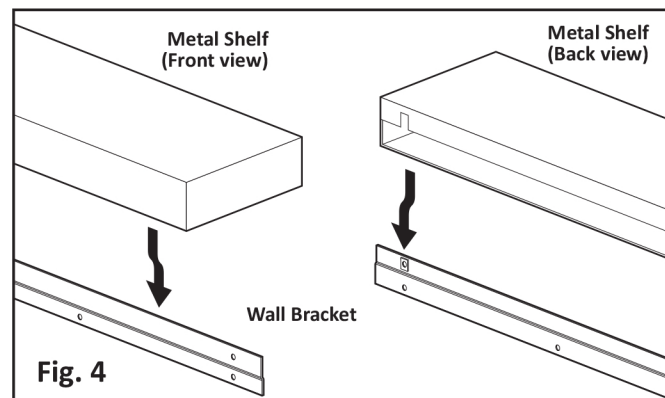

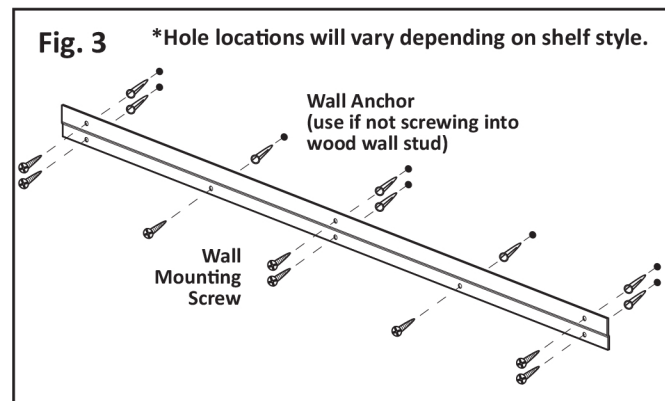

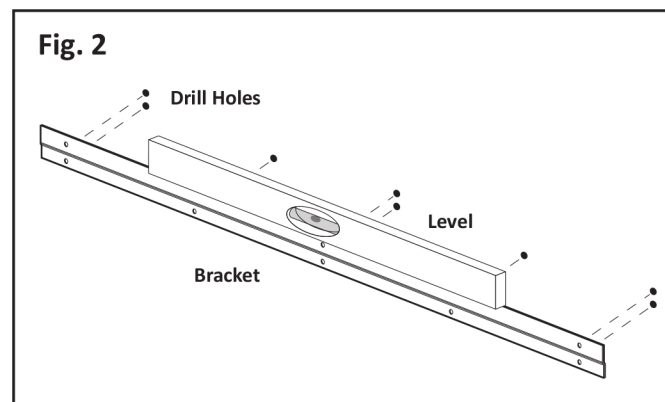

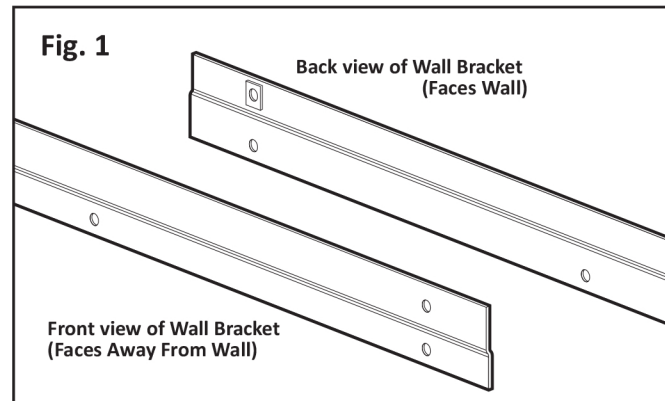

PARTS INCLUDED IN THIS BOX: Shelf, Wall Bracket, Wall Mounting Screws

### GETTING STARTED

- Remove hardware from the packaging.
- Do not dispose of packaging until the installation has been completed to your satisfaction.
- Read through the instructions entirely before starting.
- Measure the required width.
- Make certain all parts indicated are present.
- Make certain all tools and all necessary supplementary hardware are on hand before starting.
- We recommend using gloves and eye protection during installation.

### ASSEMBLY INSTALLATION

1. Determine the appropriate location of the Wall Bracket so that it aligns to a structural wall wood support whenever possible.
2. Place the back of the Wall Bracket onto the wall. (see Fig 1)
3. Use a level to determine the appropriate location. Mark with a pencil where you need to drill the holes. (see Fig 2)
4. If you are using the Wall Anchors first use a 1/4" drill bit to drill the holes. (see Fig 3)
5. Lower the Metal Shelf onto Wall Bracket. Press down on the shelf evenly until it sits flush on top of the Wall Bracket. (see Fig 4)

**IMPORTANT:** It is highly recommended that the wall bracket be attached to a structural wood support, such as wooden studs within the walls. The enclosed screws are designed for that purpose. If the studs within the wall are metal, one must pre-drill into the metal stud and use sheet metal screws (not included).
