

MAINTENANCE

SWASH CLEANING

Use a soft, damp cloth and mild cleanser (such as dish soap, Simple Green or Windex) to wipe down the seat. **DO NOT** scrub or use harsh, abrasive products to clean the Swash. **DO NOT** use thinner, benzene, acidic chemicals, chloride, or hydrochloric acid detergent. This may result in corrosion to the metal parts, discoloration, or scratches to the bidet body.

NOTE:

- Be cautious of leaving home and beauty products in contact with the bidet seat, the result of which can be irreversible discoloration. Most stains can be removed using a 1:1 mix of rubbing alcohol and water and a soft cloth or towel. Be cautious of home and beauty products (including but not limited to various hair and air freshener sprays, lotions, body wash, skin tanners, body butters, and oils) that come in contact with the seat. Wash off any substances that come in contact with the seat as soon as possible.

NOZZLE CLEANING

To clean the nozzles, gently pull them out from inside of the seat manually and use a soft cloth or toothbrush to clean off any build up. Clean front and rear nozzles in the same manner.
