#### **PREPARE**

#### FOR BARE SPOTS:

Start by mowing existing grass as short as possible followed by removing debris. Then rake the soil to loosen and smooth the top layer.

PARA ZONAS CON HUECOS O CÉSPED NUEVO: Retire los desechos y luego rastrille la tierra para aflojar y suavizar la capa superior.

#### **APPLY SEED**

Sow the seed and gently rake to cover.

APLICACIÓN: Plante las semillas y pase ligeramente el rastrillo

#### WATER

Keep the area well watered until the seed germinates and the seedlings have grown sufficiently to cover bare spots, then water as needed.

RIEGUE: Mantenga bien regada el área hasta que germinen las semillas y las plántulas hayan crecido lo suficiente para cubrir las áreas vacías. Después riegue según sea necesario.

### **ADDITIONAL CARE TIPS**

Mow lawn when grass height reaches 3" tall

Hot summers can be stressful on your lawn; increase the mowing height during hot and dry periods to reduce stress on your lawn

MOST IMPORTANTLY - Don't kill the grass before it starts by using weed control (pros call it preemergent) on your lawn until your grass has reached its full mowing height of 3"
