Wire nut

BEFORE INSTALLATION

1

Unscrew the locking ring at the bottom.

2

Install the decorative rings on the socket.

3

Screw the locking ring tightly.

INSTALLATION

This fixture is suitable for junction with 2.75inches or 3.5 inches mounting distance.

1

Turn off power source to the power supply where you are installing the fixture.

2

Remove existing fixture and disconnect all electric wires.

3

Remove decorative nuts from crossbar. Save the decorative nuts for later use.

4

Attach crossbar to the junction box with screws provided.

5

Adjust crossbar: Temporarily place fixture over crossbar to determine amount of adjustment necessary for screws on crossbar. Screws should come through canopy hole to ensure decorative nuts can be used to tighten fixture to ceiling.

6

Adjust the cord length: Loosen cord restrain on the fixture canopy. Adjust cord to desired length by pulling cord up through canopy then re-tighten cord restrain.

7

Cut excess wire if needed. Leave at least 10" of extra wire to work with. Strip and prepare wires for connection.

8

Connect same color wires of outlet box and fixture together by wire nuts. Note that junction box ground wire may be green or bare copper.

9

Arrange excess wires and wire nuts within canopy. Align holes in canopy with screws on cross bar and push up. Secure fixture to cross bar by tightening the fixture with 2 decorative nuts.

10

Install a medium base bulb.

11

Turn ON the power to the fixture.
