recordatorios de cuidados oportunos.

Easy to care for. Easy to love.

- Dig hole 1½ times the size of the pot.
- Remove from pot and place in hole.
- Fill in with existing soil and compost. Add 2"–3" of mulch to retain moisture.
- Keep soil evenly moist, not wet, and enjoy!

SPRING: After final frost, remove winter mulch and apply a slow-release fertilizer. Prune above new green growth if needed. Removing stems below green growth results in fewer flowers.

SUMMER: Water so that the soil stays consistently moist.

FALL: Do not prune or fertilize. After leaves drop, cover plant with mulch (straw, pine straw, oak leaves, hardwood bark) to protect early flower buds.

PRIMAVERA: Después de la última helada, elimine el mantillo de invierno y aplique un fertilizante de lenta liberación. Póde por encima del nuevo crecimiento verde si es necesario. Eliminar los tallos debajo del nuevo crecimiento resultará en un menor número de flores.

VERANO: Riegue constantemente asegurándose de que el suelo permanezca constantemente húmedo.

OTOÑO: No pódre o fertilice. Después de la caída de las hojas, cubra las plantas con mantillo (paja, paja de pino, hojas de roble, corteza de madera dura) para proteger los primeros brotes de flores.

Warning: Not for Human or Animal Consumption
Advertencia: No apto para el consumo humano o animal
