

Recommended Placement Guide

2" Steel Mesh Chair

For our 2" Steel Mesh Chair, we recommend placing a chair every 24" in each direction. Simply pull the mesh up off the ground and snap the chair's clips onto the mesh's wire crossing from the bottom.

The 24" spacing allows one to walk on the mesh between the chairs. The mesh will fall to the ground when walked on, but spring back up into place when stepped off. Our Steel Mesh chairs ensure the mesh stays in the right place before, during, and after the concrete pour.
