SPECIFIC REPELLENTS FOR  
SPECIFIC PESTS

# GOPHER SCRAM™

## GRANULAR REPELLENT

## EASY TO APPLY INSTRUCTIONS

### FOR BEST RESULTS: MUST USE A SPREADER

#### 1 SET YOUR SPREADER SETTING TO 60% OPEN.

Each spreader has holes that dispense product. Because of the variety of spreader styles - look at your spreader's holes' open & close. Typically left is lowest & right is wide open. Middle point is 50%. You may need to adjust for proper coverage as spreader conditions, rate of walk are just some of the variables that can affect the rate of application.

**A 10 lb. bucket will cover approx.  
6,000 square feet. (ie. 60 ft W x 100 ft L)**

- 2 Apply over entire area where you see gopher holes. Also drop 1/2 cup of Gopher Scram™ into the holes (open plugged mounds to access tunnels) Then fill the open holes with soil and re-plug the closed mounds after applying.
- 3 Water the affected area where Gopher Scram™ has been sprinkled or spread for approximately 20 minutes. **Watering is the key to activating oils** from the granules into the soil.
- 4 Repeat in 10 days and then again in 30 to ensure they have left the area.

## SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at [epicrepellents.com](http://epicrepellents.com)
