

# Connect-ALL Instructions

The Connect-ALL consists of a flexible strap, one connector and two slide hooks. It is shipped completely assembled.

## To Use:

1. Wrap the strap around a pole, bollard, tree or whatever object you choose;
2. Holding the connector against the object, pull the free end to create tension;
3. Slide two of the holes in the strap over the buttons on the connector;
4. Position the slide hooks in the desired position; 180 degrees apart to form a straight line or 90 degrees apart to go around a corner, and anywhere in between;
5. After you have the slide hooks in the correct positions, you may need to tighten the strap;
6. Then hang our plastic chain from the slide hooks to form a visual barrier.

The Connect-ALL can be used in between square posts, round poles, or even between trees, to form a visual barrier.

The Connect-ALL is available in two sizes: small which fits up to an 11" diameter object and large which fits up to a 17" diameter object.

Another innovative Mr. Chain product!

Proudly made in the USA!
