

Caring for Your Air Plants

1 Carefully unpack your new plants.

2 Submerge in container of distilled, room temperature water, for about one minute to rehydrate.

3 Shake gently to remove excess water, then place in a well ventilated area to dry.

4 Keep air plants in a spot where they receive a moderate amount of sunlight.

5 Lightly mist plants with a spray bottle 2 or 3 times a week.

Watch Them Thrive!
